BMP®51 MATERIALS

Label Installation Styles for Vials and Tubes

The right label, when properly installed, will give you maximum performance. Here are descriptions of the label styles found on the following pages.

Free Standing Label Style

- Label does not wrap around to overlap itself
- Provides window to view liquid level inside vial

Short Overlap Label Style

- Label wraps around vial to slightly overlap itself
- Provides low profile
- Window to view liquid level inside vial exists with self-laminating materials

Long Tail Overlam Label Style

- Label wraps completely around vial and clear tail extends over text for additional solvent and handling resistance
- Provides window to view liquid level inside vial

Straw and Rod Labels

Available for both small and large straws, these self-laminating labels protect the printed information for lasting identification.

Withstands:

- Liquid nitrogen (-196°C)
- Freezer (-80°C)

Diagram	Catalog #	Color	Label Dimensions A Inch (mm)	B Inch (mm)	C Inch (mm)	Material & Tube Size	Labels/ Roll
B-427 – Self-Laminating vial label for cold temperatures only; lasts in liquid nitrogen and freezers.							
Long Tail Overlap

Cryo-Cane Labels

Sized to identify the end of a cryo cane. Should be wrapped around the edges of the cane to maximize adhesion.

Withstands:

- Liquid nitrogen (-196°C)
- Freezer (-80°C)
- Hot water bath (+100°C)*

Diagram	Catalog #	Color	Label Dimensions A Inch (mm)	B Inch (mm)	Labels/Roll
B-492 - Lasts in liquid nitrogen; sized to ensure ends of label can fold beneath a standard cane top.					
Fig. 66	M-155-492	BK on WT	1.250 (31.75)	0.250 (6.35)	180
