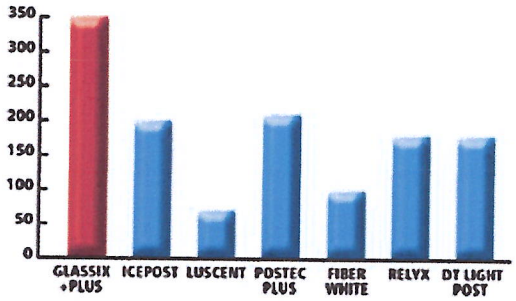
Radiopaque & light transmitting fiber post

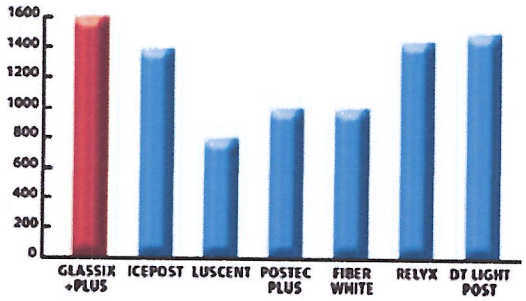
Glassix Plus is the latest generation of highly radiopaque & light transmitting fiber post. Anatomically shaped to fit the root canal (cylindro-conical) with a colour coding for easy identification and mechanical retentions they come in 4 different sizes.

Indication:
For corono-radicular reconstructions.

Radiopacity % aluminium equivalent:



Flexural strengh Mpa:

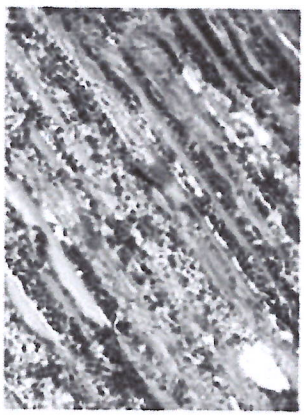


Advantages:

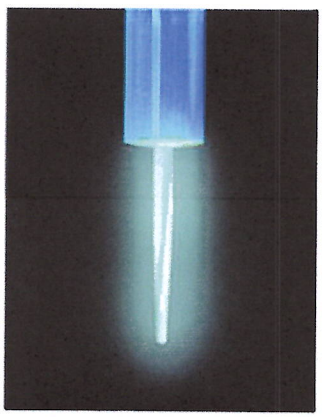
Optimal radiopacity (350%Al.)
Light conducting for the use of Dual curing resin cements.
Anatomically shaped with a helicoïdal structure – twisted groves – that gives mechanical retention without any breakage points.
Elasticity close to natural dentine (20 Gpa)
Enhanced mechanical properties (1500Mpa)
Aesthetic thanks to its translucent matrix.
100% biocompatible- epoxy free

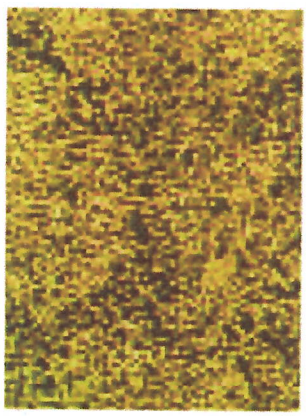
Radiopacity
350% Al

SEM imges



Light transmitting





The outstanding feature of Glassix is that it has an esthetically pleasing toothcolor which will blend with and not show through the composite restoration.

How to use Glassix Plus

GLASSIX+plus
is supplied
in a kit with
4×5 Glassix +plus
+ 4×1 Reamer
+ 1 Pilot Reamer
