KNEE
PRESERVATION
SYSTEM™

The **Sequent® Meniscal Repair Device** is an All-Inside,
Stay-Inside system comprised of PEEK implants and Hi-Fi®
suture that can create up to six continuous stitches for a
knotless repair in any configuration.

This technology provides surgeons a meniscal repair technique with the opportunity for a faster repair. It also reduces meniscal trauma and the risk of chondral damage.

Target any size meniscal tear pathology, including oblique, longitudinal, transverse, horizontal and bucket handle with ease, using as few as two or as many as six continuous stitches.

Sequent® devices come in three different size configurations, allowing surgeons to choose the right tool to repair virtually any meniscal tear using the easy-to-master PRDT™ technique.
