

TECHNICAL SPECIFICATION**IQ 220 Key + 35 Box Cabinet**

A key cabinet can be used for the continuous and accurate management of the issuance / return of staff keys. Having a key cabinet would not require to take out the keys to the offices, and it would be possible to leave personal pistols in the locker, which cannot be brought into the headquarters, but there are no places to leave them.

The key cabinet user's identification can be made by scanning the electronic card, entering the pin code or scanning the fingerprints. Identification may be used singly or in combination.

The key cabinet has the ability to assign stored keys to users.

The key cabinet has 30 places for keys in separate boxes and at 220 seats for simple keys, 5 boxes for weapons (pistols). The number of keys may be expanded by connecting more blocks next to the existing key cabinet.

The user, after identification by card, pin code or fingerprints scanning, logs in to the system and, when retrieving the keys, sees a list of the keys assigned to him (retrievable keys as well). The user has the option to select a key from the keys assigned to him, to add the assigned keys, even if another user has taken them.

Emergency key collection is provided in the locker. There is a tamper protection (triggers an alarm when attempting to unscrew the cabinet bolts).

The key cabinet has the ability to store data. The key cabinet is connected to a software module to which it is connected via a USB cable or LAN, and the module can perform key assignment planning and transfer the programmed data to the system after connecting to the system. The module allows to transfer reports on the use / storage of keys to CD / DVD in Microsoft Excel or CSV format.

The key cabinet has a touch-screen for control. The key cabinet doors may be transparent. Color RAL 9002.

Power supply – 230V50Hz/110V60Hz AC.

The length of the cabinet will not exceed 3.5 meters.

The key cabinet can be attached to the floor or to the wall.

The key cabinet will be delivered, programmed, set up and ready for use. Training of staff to work, program and receive reports, user manual in Lithuanian will be provided.

Warranty for 24 months. In the event of failures, the supplier arrives at the site to handle them, and if this fails, the cabinet is transported to the supplier's capacity.
