

Oper tape

Flexible tape

Fixation of primary dressings, catheters and tubes

Non-woven fabric adhesive tape
highly permeable to O₂ and water vapour

Adaptable, extendable and highly porous non-woven fabric coated with hypoallergenic adhesive.

- Maximum adaptability and comfort.
- Safe and comfortable barrier.
- Optimal fixation.
- High breathability.

Transversal extensibility of non-woven fabric

Transversely extendable tape for easy and optimal fixation, even on parts of the body affected by joint movements, without the risk of becoming detached.

The hypoallergenic acrylic adhesive enables safe and effective fixation of primary dressings, catheters and tubes.

Permeable to O₂ and water vapour

Highly permeable to O₂ and water vapour thanks to the porous structure of the non-woven fabric and an innovative adhesive application process.

High resistance to moisture thanks to its acrylic adhesive.

Easy to use

For the patient

Hypoallergenic adhesive suitable for all skin types, enabling painless removal, without leaving residue on the skin

For the healthcare professional

Adhesive area protected by silicone-coated paper with a wave-shaped cut enabling fast and easy handling.

The wide range of Oper tape sizes covers any pad size in a single application, for easy use by hospital personnel.

Fixation of primary dressings, catheters and tubes

Oper tape

Highly absorbent dressing

Fixation of primary dressings, catheters and tubes
