### The compelling reasons behind the fifth row

The new volta was born out of demands for enough free space for heat to develop, plenty of room for protective and control devices, and sufficient wiring space to enable simple, tidy installation. And with its 60 space units, it lives up to all of these. Not only that, but it still offers the same proven plus points that it has always had. So you can expect the new volta to bring you all kinds of benefits.

## The volta small enclosure gets a fifth row

Available  
from  
autumn  
2014

### The new 5-row volta

The new volta marks Hager's launch of the very first 5-row small enclosure on the market. Not only does it offer even more space for electrical installation, but it has also inherited all the same unbeatable installation benefits that are already familiar from its four smaller predecessors. Rapid assembly, the option of aligning the frame or changing the door stop as required, and the fast, intelligent fastening concept for the cover are just some examples of the features it offers. As well as this, it benefits from a wide range of accessories and an improved design for installing VDI components. So you can take advantage of a flexible approach to installation – and expect the new volta to bring you all kinds of other benefits.
