SHARING EXPERTISE

AES

Quality leads to economic efficiency.

For more than 140 years, the Aesculap name has been synonymous with a high level of quality in the development and manufacture of surgical instruments, containers and motor systems. High-quality products allow smooth processes and reliable use. However, it is not only the reliable use of products that makes the difference, but also the depth of our expertise. Aesculap Technical Service has the specialist skills required for the entire Aesculap range – from straightforward surgical instruments to complex motor systems.

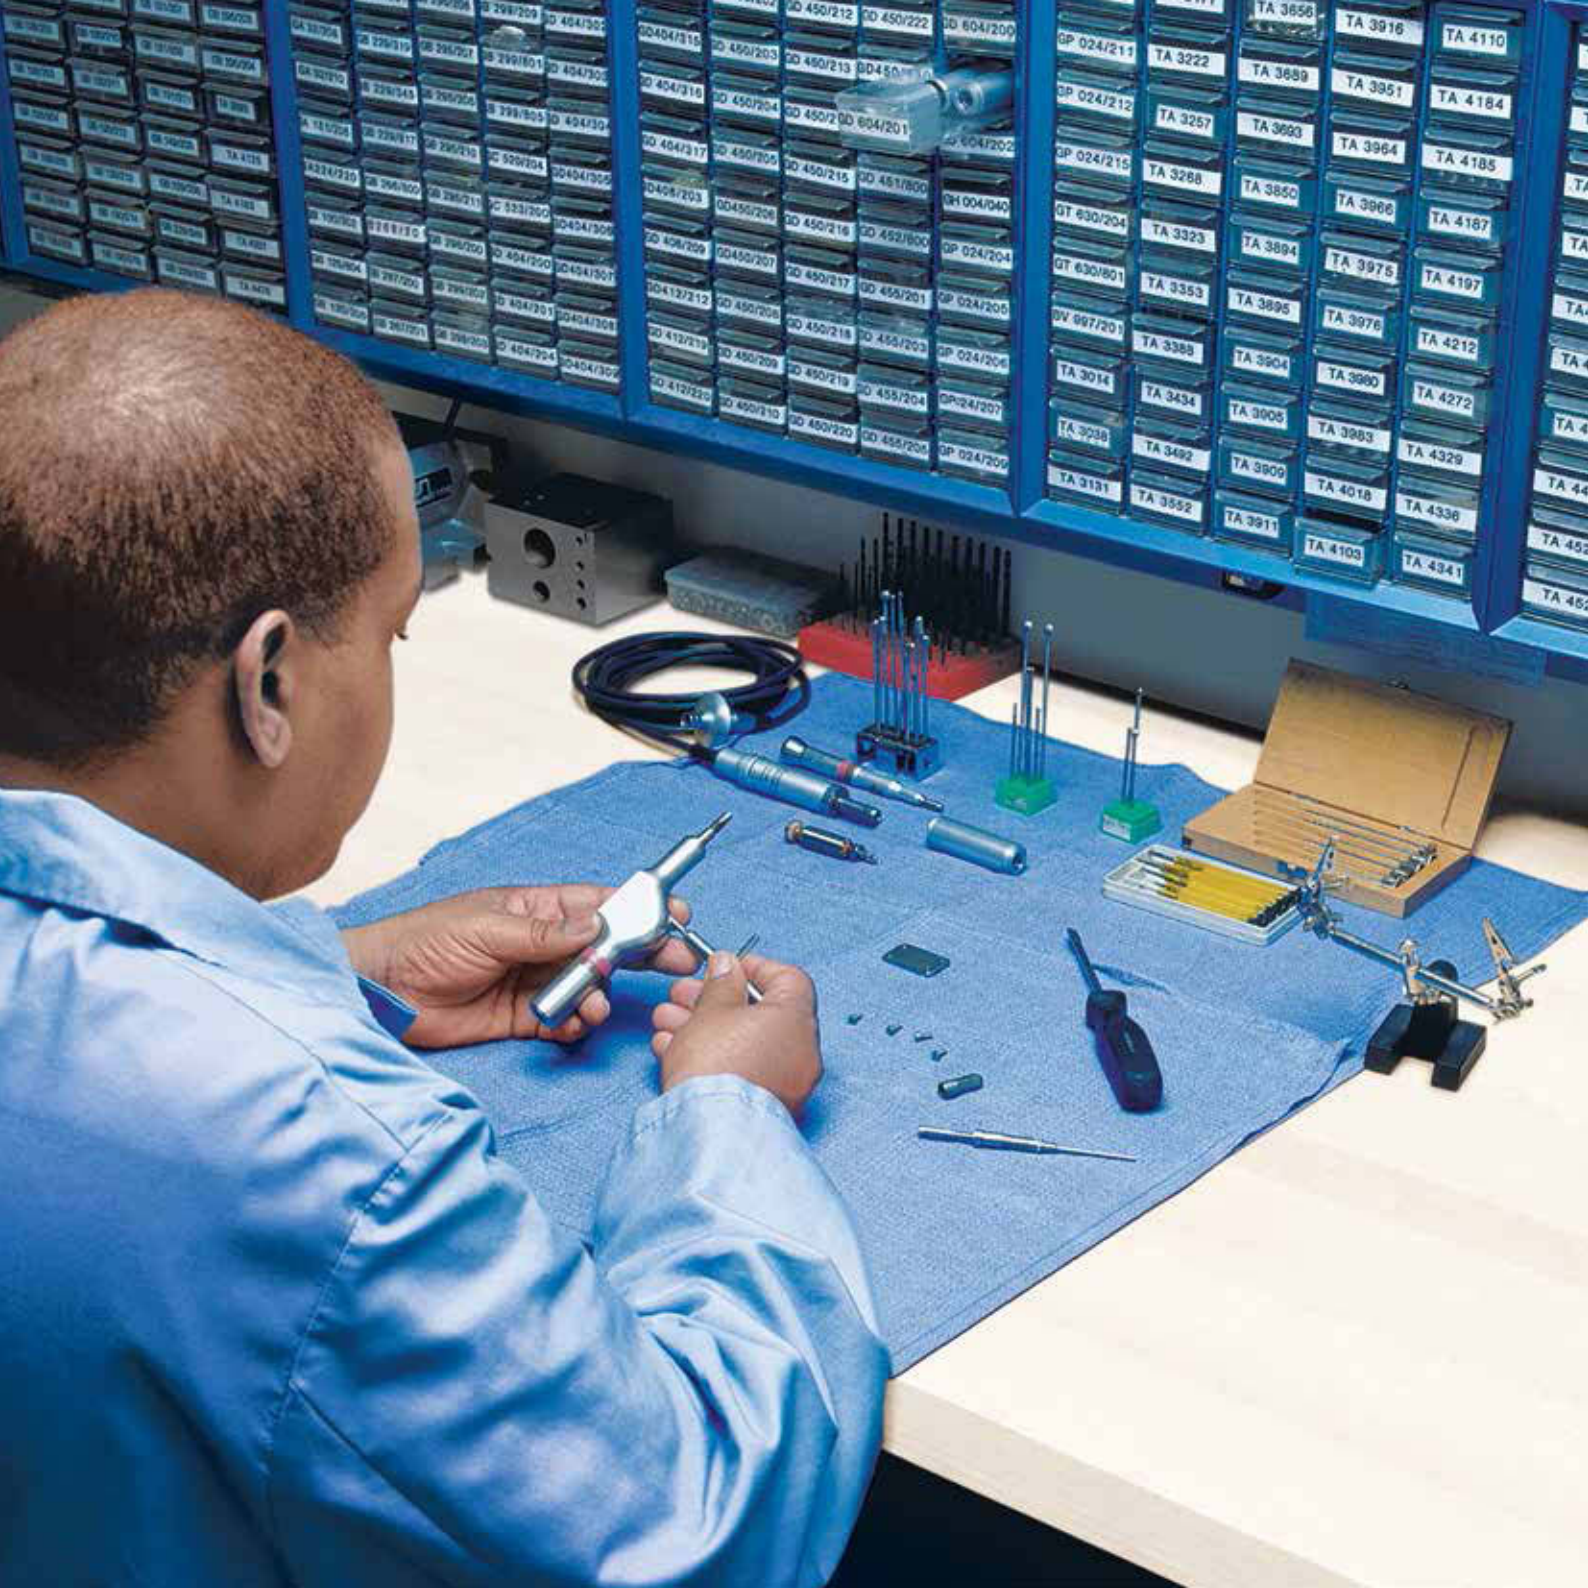

Functional products enable smooth and economic surgical procedures. The professionals at Aesculap Technical Service provide a high level of quality, reliable repairs and expert technical ability.

Is it not that easy to replace an Aesculap original part.

Our Service colleagues always aim to repair parts or components. A replacement is performed only if a repair is no longer possible or is not economically feasible. In this case, our employees rely on Aesculap original spare parts.

Aesculap original spare parts fit together, meet our strict company standards, and allow flawless operation. The special tools required correspond to the latest state of technology. This also applies for our highly trained employees. They have the knowledge and the technical abilities required to repair parts and components properly.

Traditional Aesculap durability.

Your valuable inventory of premium surgical instruments, sterile containers and motor systems must be preserved. Aesculap products have been used successfully for many years, guaranteeing the cost-effectiveness of your inventory.

At the forefront lies premium steel that meets Aesculap company standards. This extremely corrosion-resistant material has been selected specifically for use in surgery and is used to manufacture first-class surgical instruments. The manufacturing process must be precise and always exactly to measure. Our employees in Aesculap Technical Service also comply with this requirement. An instrument repaired according to manufacturer's specifications is comparable to a new one. This combination of first-class surgical instruments and professional repair create the basis for many years of use in surgery.

Aesculap Quality Repair. Service with premium performance.

Our work is founded on precisely defined repair standards that are subject to quality monitoring. Regular advanced training sessions allow that our Service employees are up-to-date with the most recent developments. They work through specified certification levels to maintain a consistently high level of quality.

Gain your own impression of Aesculap Service. At Aesculap Technical Service, you can look over the shoulders of our Service employees while they show you just what the repair work involves. We look forward to your visit.

Only the "ATS stamp" with the Aesculap rod of Asclepius stands for Aesculap Service and premium performance.

Repair at the manufacturer's level of quality.

Aesculap quality repair involves returning products to as mint a condition as possible – including a final check in accordance with the strict Aesculap company standards.

Repair to the manufacturer's quality means a repair that is professional, in line with manufacturer's specifications and above all, reliable. Impeccable functionality must be maintained. This means, for example, that tungsten carbide inserts in Aesculap surgical instruments are always attached using a special vacuum soldering method. Parts in sterile containers are originally riveted as a matter of course and, in trepans, the angular and cutting geometries are precisely reproduced. Only people who manufacture medical products themselves are able to draw upon their experience from production and understand what repairs need to be performed.

Force requires sensitivity.

The motor systems of today offer a great deal of force. Using this power in a targeted way requires keen instincts and experience on the part of the operator. The right knack combined with special knowledge distinguishes our employees in Aesculap Technical Service.

Only a precise interaction between people and advanced technology allow reliable use of the motor systems – for the benefit of the user and for the well-being of the patient.
