SMALL/LARGE SYSTEM DIFFERENCES

Device has option for small systems (-S) and large systems (-L). Small system option is typical for vehicle applications and large system option is standard in marine applications because of the marine regulations. Complete system should be looked when choosing the option as for example vehicle system with many devices could also need the L-option to keep the isolation resistance or Y-capacitors at reasonable level. In large and small system options, there are differences in the isolation measurement resistance, DC-link discharge resistor and Y-capacitor values as shown in Picture 5 and Table 3.

Component	Small-system option	Large-system option
Isolation measurement R1, R2	12 M Ω	240 M Ω
Discharge resistor R3	3.9 k Ω	39 k Ω
Y-capacitor C1, C2	330 nF	3.3 nF

Isolation resistance from DC-link to enclosure	6 M Ω	120 M Ω

Table 3 S/L-system differences

Device with +MC, +AFE or +UG option has internal schematic shown in Picture 4. Possible additional equipment like LCL-filter or motor is connected to the phases L1, L2 and L3. Options +AFE and +UG are not compatible with the -S version of the device. Generally, option -L is recommended for all applications.

Device with +DC option requires external inductors to work as seen in application example shown in Picture 5. LV+ and LV- can be connected, for example, to battery and DC+ and DC- to a higher voltage DC-link. Device is in control of the discharging and charging of the battery. +DCE option is recommended when using the device in combination with the external inductance unit.

Different connection options of the electric device are shown below.

PARAMETRIZING, MONITORING AND DIAGNOSTIC OF THE DEVICE

PowerUSER monitoring and diagnostics software uses service connector on the device and PSSC service cable for connecting to the device. The PSSC is isolated RS485 and shielded cable specially designed for the demanding environments where the inverters are used, and it is available in 3 meter (PSSC-3M) and 10 meter version (PSSC-10M). The service cable is ordered separately.

Product code	Cable length	Description
PSSC-3M	3 meters	USB to RS485 isolated service cable
