Sometimes less is more. We've greatly simplified our previous design by utilizing a double S-curve comparable to our Basic Film Carrier 120 MK2 and eliminating the complex hinge mechanism that was cumbersome to use. The Pro Film Carrier 120 MK2 keeps your medium format film completely flat by using the optimal length and depth measurements for an s-curve based on months of rigorous testing. The Pro Film Carrier 120 MK2 requires no additional hardware or tools to swap film cassettes, just like its Basic counterpart! We designed this with simplicity and ease of use in mind.

The Pro Film Carrier 120 MK2 builds on the modularity of our system by not only featuring an interchangeable, magnetically engaging cassette but also an interchangeable roller module for additional formats just like the newly revised Pro Film Carrier 35 MK2. Standard with every Pro Film Carrier 120 MK2 is an interchangeable mask set for 6x4.5, 6x6, 6x7, and 6x9cm formats. This product will be compatible with dozens of other larger than 35mm film formats with film advancing capability in the near future! The all-new Pro Film Carrier 120 MK2 is the new benchmark for film photographers.

Scans up to 6x9cm negatives or transparencies in a single image capture, and easily scans panoramic 120 film by stitching two or more exposures. With a universal mounting point via our Basic Film Carrier 120 MK2 for Light Source, this new carrier is quickly and easily added to a wide range of Negative Supply light sources and other products for a more stable workflow that also eliminates extraneous light from negatively impacting your film scanning.

refined smooth-running bearing

- Keeps film perfectly flat for sharp scans thanks to our improved double s-curve film guide in our uniquely designed film scanning cassettes
- Utilizes an optional Adapter Plate to mask off additional light from below and keep your carrier stable on one of our various light sources as well as compatibility with our Pro Mount MK2
- Interchangeable cassette that's easily removable with no required tools or hardware
- Standard cassette designed for 120 film shows the full image area
- Includes masks for 6x4.5, 6x6, 6x7, and 6x9cm formats
- Tighter, flatter and smoother film advancement less prone to "drift" thanks to our unique film cassette design
- An optional 120 Film Scanning Hood has been redesigned with a press-fit hood and adapter for quick and easy installation requiring no additional hardware or tools for installation
