# TECNOLOGIA INNOVATIVA QUALITÀ SUPERIORE INNOVATIVE TECHNOLOGY SUPERIOR QUALITY

Dal 1979 in FL Medical ci occupiamo della produzione di articoli monouso per laboratorio di analisi con una costante crescita della nostra presenza nel mercato mondiale. Siamo particolarmente orgogliosi di questo, ma il nostro obiettivo primario rimane la soddisfazione del cliente, perché crediamo che solo questa porti al continuo miglioramento della qualità dei prodotti. Ogni cliente FL Medical ha il vantaggio di poter contare su una struttura perfettamente organizzata, certificata ISO 9001 e ISO 13485, in grado di affrontare tutte le fasi di realizzazione di un prodotto, sfruttando al meglio i continui nuovi aggiornamenti tecnologici di produzione per aumentare la nostra capacità produttiva e la qualità che puntualmente forniamo.

*Since 1979 in FL Medical, we have been attending to the production of disposable items for analysis laboratories with our presence constantly increasing in the world market.*

*We are particularly proud of this, but our main target is to meet the customer's need because we think that the customer's satisfaction is the key to keep increasing the quality of our products.*

*Each FL Medical customer can trust a perfectly organized company certified ISO 9001 and ISO 13485, able to carry out all the phases of production as well as to take advantage of the latest technology to increase our production capabilities and the quality that we are able to provide.*

Informazioni tecniche sui materiali impiegati

Technical informations about the raw materials used

#### **POLIPROPILENE (PP)**

Questo materiale appartiene al gruppo delle resine poliolefiniche. È infrangibile, leggero ed ha un'ottima resistenza chimica e meccanica, ma allo stesso tempo è flessibile.

Il polipropilene (PP) può essere suddiviso nei seguenti tre tipi:

PP omopolimero: Rigido ed abbastanza trasparente.

PP copolimero Random: Meno rigido ma più trasparente del PP omopolimero.

PP copolimero: Rigido come il PP copolimero Random ma opaco.

#### **POLIETILENE (PE)**

Anche questo materiale appartiene al gruppo delle resine poliolefiniche, possiede quindi le stesse caratteristiche tecniche e meccaniche del polipropilene.

Il polietilene (PE) può essere diviso nei seguenti tre tipi:

LDPE: Morbido e trasparente.

LLDPE: Morbido e trasparente ma più lucido e più resistente rispetto al LDPE.

HDPE: Rigido ed opaco.

#### **POLISTIROLO (PS)**

Questo materiale appartiene al gruppo delle resine stireniche.

È completamente trasparente e con elevate proprietà

meccaniche e di lavorabilità. Grazie proprio a queste

caratteristiche il campo di applicazione è molto vasto.

Il polimero di questo gruppo che trova maggior diffusione

nel settore delle provette e dei contenitori è il POLISTIROLO

CRISTALLO, che è un prodotto molto resistente e trasparente.

#### **POLIMETILMETACRILATO (PMMA)**

Questo materiale appartiene al gruppo delle resine acriliche.

È la materia plastica con caratteristiche più rassomiglianti al vetro.

Sicuramente le caratteristiche principali che distinguono questa

resina dalle altre sono: l'eccellente trasparenza, l'ottima resistenza

all'abrasione, la buona resistenza alla rottura e ai raggi UV.

#### **POLYPROPYLENE (PP)**

*This material belongs to the group of polyolefin resins.*

*It complies with FDA. It is unbreakable, light, with an excellent chemical and mechanical resistance, but at the same time it is flexible.*

*Polypropylene (PP) can be subdivided into the following three types:*

*PP homopolymer: Rigid and quite transparent.*

*PP copolymer random: Less rigid but more transparent than PP homopolymer.*

*PP copolymer: Rigid like PP copolymer random but opaque.*

#### **POLYETHYLENE (PE)**

*This material also belongs to the group of polyolefin resins, therefore it has the same technical and mechanical features of polypropylene.*

*Polyethylene (PE) can be divided into the following three types:*

*LDPE: Soft and transparent.*

*LLDPE: Soft and transparent, but glossier and more resistant than LDPE.*

*HDPE: Rigid and opaque.*

#### **POLYSTYRENE (PS)**

*This material belongs to the group of styrene resins.*

*It is completely transparent with elevated*

*mechanical and processing properties.*

*Thanks to these features, the application field is very wide.*

*The most commonly used polymer in this group for test*

*tubes and containers is CRYSTAL POLYSTYRENE, which*

*is a very resistant and transparent product.*

#### **POLYMETHYLMETHACRYLATE (PMMA)**

*This material belongs to the group of acrylic resins. It is the*

*plastic material with features most similar to those of glass.*

*Certainly, the principal features that distinguish this resin from*

*the others are: excellent transparency, great resistance to*

*scratching and good resistance to rupture as well as UV rays.*

“Mio padre una volta mi raccontò che esistono due tipi di persone: quelli che lavorano e quelli che si prendono il merito.  
Mi disse di cercare di stare nel primo gruppo. C'è meno concorrenza.”

*“My father told me that there are 2 sort of people: the ones that work and the ones who take the merit for it.  
He suggested that i should remain in my group because there are fewer competitors.”*
