

6 X 0,7 ML
PREFILLED SYRINGES

TWIN

0,18% TRYPAN BLUE + 0,03% BLULIFE

TISSUE STAINING

TWIN is 0,18% trypan blue + 0,03% blulife ($C_{48}H_{50}N_3NaO_7S$) in physiological solution, packaged in prefilled syringes of 0,7 ml each, for reversible staining of the retinal membranes and the inner limiting membrane (ILM). The product warrants a prompt and effective tissue staining, without any risks for the patient. It contains a thickening agent that improves the contact between the dyes and the tissues, thus allowing a clear visualization of the retinal membranes and the inner limiting membrane. In addition, it simplifies the surgery, making superfluous the fluid/air exchange performed before the dye injection, in order not to dilute it.
