MPN - FC120HOODM2

This film scanning hood securely mounts onto your Basic Film Carrier 120 MK2 and reduces glare when scanning in well lit rooms which can result in higher contrast scans. This device helps to prevent reflections from lamps, overhead lights, window light and more by preventing excess light from bleeding onto your scans.

Boasting a carbon fiber construction with increased strength and durability and utilizing a unique, in-house manufacturing process, the 120 Film Scanning Hood MK2 helps round out your film scanning workflow. This is a 3 piece set that includes a press fit adapter, the first and second stage hood assembly. This is similar to our 35mm Film Scanning Hood design in that it does not require any hardware to install.

This is compatible with the Pro Film Carrier 120 MK2 and Basic Film Carrier 120 MK2 only.

Base height is 3.5in. Extension height is 2.25in. Combined, the hood is 5.75in tall.
