The Negative Supply Pro Film Carrier 35 MK2 is an evolution in 35mm film carriers for film scanning with a digital camera. The Pro Film Carrier 35 MK2 utilizes the same basic design as the Pro Film Carrier 35 but adds an important feature that power users, labs and lovers of alternative formats will want: an interchangeable roller module. Currently, we have cassettes for 35mm (half frame and panoramic included), 35mm full border, 110, APS, 126 and Minox subminiature with more on the way including 8mm and more!

The interchangeable roller modules will come separately from the cassettes so users of the Pro Film Carrier 35, Basic Film Carrier 35 MK2 and Pro Film Carrier 35 MK2 customers don't need to purchase accessories they don't need. We design all of our tools to be as modular as possible to provide users with the ability to adapt our tools to whatever their needs may be. User replaceable format cassettes and roller modules are a big leap forward and we are very excited to be innovators in the space that allow for a better workflow for many users.

What if I already own a Pro Film Carrier 35?

The Pro Film Carrier 35 is already an amazing tool for scanning 35mm film formats and others if you don't mind hand-feeding the film through the carrier. The Pro Film Carrier 35 MK2 was designed after user feedback that reported the desire to utilize the advance mechanism for alternative formats, namely 8mm and 110/16mm. We wanted to bring an updated model out that catered to users with many formats they need to scan but wanted this core design feature. The best part is that all of the current accessories for the Pro Film Carrier 35 will transfer right over to this carrier with the exception of the Pro Film Carrier 35 Adapter Plate for Light Source Pro/Basic and Light Source Mini. The cassettes are the
