

Pleuracan®

Set for closed pleura and thorax drainage

Pleura Drainage Systems

Pleuracan®

Pleuracan®

Accumulations of air and/or fluid within the pleura-, pericardial or abdominal space can cause life-threatening disorders of the respiration as well as the cardiac function.

Therefore, the objective of every emergency therapy is to guarantee remedy for the air or fluid. This used to be done either by needle puncture or by placing a sterile, surgical suction drainage.

Large lumen catheters (so called Bülau Drainages) are to be avoided whenever possible, from the costs' point of view and the advantages of a "minimal invasive surgery" for the patient.

Pleura Drainage Systems

Presentations

	Code No. (REF)	Sales unit/Pcs.
Pleuracan® A, Complete Set	446 2556	10
■ Thin-walled puncture needle with short bevel 3.35 x 78 mm ■ Certon® catheter 2.7 x 450 mm ■ Attachment needle ■ Double anti-reflux valve ■ Secretion bag 2.0 l ■ Omnifix® lock, 60 ml ■ Discofix® three-way stopcock		
Pleuracan® B, Basic Set	446 2505	10
■ Thin-walled puncture needle with short bevel 3.35 x 78 mm ■ Certon® catheter 2.7 x 450 mm ■ Attachment needle ■ Double anti-reflux valve ■ Discofix® three-way stopcock		
Secretion bag		
■ 2.0 l treated with EO	442 5200	250
■ 2.0 l single packed, sterile	442 3208	100

Available on request
