

MEDICAL COOLING & HEATING SYSTEMS

ultra low freezer series

ULT 470

EF 600

EE 150

ULT serie -86

ULT 730

-86 ultra low freezers:

- Ultra low freezers have net volume of 470 and 720 liters.
- The temperature set value can be adjusted the range of -50°C and -86°C on the device's screen.
- The device roll out from our factory by being set to -86°C.
- The inner surface of the device is made of cr-ni alloyed stainless steel material. The outer surface is made of sheet material painted with antibacterial electrostatic powder paint.
- The thermostat which sends data to the control panel of the device, measures with sensitivity of 0.1°C.
- The inner cabin is cooled by the static direct cooling method with the cooling pipes surrounding the cabin.
- The device has cascade cooling system.
- The temperature/time graph of the last 140 minutes can be seen on the screen of the device.
- The device has usb port for recording temperature data. 30 days of temperature data can be recorded to usb memory.
- Pt100 temperature sensor is used in the device.
- 12 cm polyurethane foam is used for good insulation in the device.
- There are two sealing gaskets in order to improve the insulation on the door part of the device.
- Insulating material covers are used in the cubicle of the device, so that the temperature in the cabin does not rise too much when the door of the device is opened.
- Covers with insulating material are used in the cell of the device so that the temperature inside the cabinet does not rise too much when the door of the device is opened.
- The device is microprocessor controlled.
- Every step is done with encryption method in order to prevent unauthorized people from using the device.
- There are 2 free wheels and 2 stoppers wheels for easy transport of the device.
- There is an automatically charged accumulator system on the control panel of the device. This system ensures that the digital control panel continues to operate for 72 hours in case of power failure.
- The device gives warning with visual and audible warning signals when the upper and lower temperature limits are exceeded, when the door of the device is left open, when there is a power cut or low voltage problem while the ultra low freezers are operating. It sends the error codes to the screen, the thermal printer and the files received from the usb.

EF 300

EF 600

Our laboratory freezers are produced with 3 different capacity option.

- The outer surface of the device is made of galvanized steel, painted with electrostatic paint to protect against rust. The inner surface is produced of stainless steel.
- The device operates with 195-230 V/50 Hz network voltage.
- The door of the device comes with a high density polyurethane filling insulation, which has a heating surface and magnetic seal rings to provide impermeability.
- The inner shelf system has been produced of stainless steel material. It has been designed ergonomically for speeding up the air circulation.
- The deep freezer provides the opportunity to store between -20°C / -40°C.
- The insulation of the deep freezer is provided with a high density of polyurethane material.
- The device works smooth and quietly.
- The lightening of the inner cabin of the device is carried out with LED lights.
- The user-friendly digital control panel, which carried out with a micro processor, enables to keep the data in memory for 30 days.
- There is a USB socket to transfer the cabinet temperature information to the computer

when requested. In this way, the 10 year old temperature records can be transferred to the PC in excel format.

- There is an accumulator system charged automatically at the control panel of the device. This system allows the control panel and thermal printer (if available) to operate for 24 hours when the electricity cuts off.
- The freezer alerts you with visual and audio signals when the lower and upper temperature limits are exceeded, the door of the device is left open, low voltage and/or electricity cut off problems occurs.
- The refrigerant and the insulation of the deep freezer do not contain CFC gas which is harmful for the OZONE.
- There are two braked and two regular castors on the device that provide easy portability.
- As per request of the user, a thermal printer can be installed at the device. The numerical printout of the recorded data can be taken with the thermal printer.
- All medical devices produced by Emsas A.S. are guaranteed for 2 years.
- All our products are produced in line with the ISO 9001:2008, TSE service place competence certificates. Our deep freezers have CE certificates.

TOUCH SCREEN FEATURES

- 5.5 inch touch screen
- temperature - time graph
- Encryption system that prevents unauthorized access
- Changing screen color and audible warning in case of alarm
- 10 years data recording on USB.
- Remote access via optional wifi, ethernet or rs232.
- Alarm; low high temperature, open door, power failure alerts.
- Operation error control and warning system (Sensor, compressor, communication)
- There is a remote alarm connection output.
- Instant temperature monitoring with optional wifi, ethernet, and the ability to send e-mail and voice messages over the internet in case of alarm.

JUTIMO EKRANO FUNKCIJOS

- 6p.
- 5,5 colio jutiklinis ekranas
 - temperatūra – laiko grafikas
 - Šifravimo sistema, kuri apsaugo nuo neteisėtos prieigos
 - 10p. • Ekrano spalvos keitimas ir garsinis įspėjimas aliarmo atveju

Mūsų laboratoriniai šaldikliai gaminami su 3 skirtingos talpos parinktimis.

4p. • Prietaiso išorinis paviršius pagamintas iš cinkuoto plieno, nudažytas elektrostatiniais dažais, apsaugančiais nuo rūdžių. Vidinis paviršius pagamintas iš nerūdijančio plieno. 4. L.p.

10p. • Prietaisas veikia su 195-230 V/50 Hz tinklo įtampa.

• Prietaiso durelės turi didelio tankio poliuretano užpildo izoliaciją, kuri turi kaitinamąjį paviršių ir magnetinius sandarinimo žiedus, užtikrinančius nepralaidumą.

• Vidinė lentynų sistema pagaminta iš nerūdijančio plieno. Jis buvo sukurtas inergonomiškai, kad pagreitintų oro cirkuliaciją.

5p. • Gilus šaldiklis suteikia galimybę laikyti nuo -20°C / -40°C.

• Šaldiklio izoliacija yra padengta didelio tankio poliuretano medžiaga.

• Prietaisas veikia sklandžiai ir tyliai.

• Vidinės įrenginio kabinos apšvietimas atliekamas LED lemputėmis.

6p. • Patogus skaitmeninis valdymo pultas, atliekamas su mikroprocesoriumi, leidžia išsaugoti duomenis atmintyje 30 dienų.

3p. • Yra USB lizdas, per kurį galima perduoti informaciją apie korpuso temperatūrą į kompiuterį, kai to prašoma. Tokiu būdu 10 metų senumo temperatūros rekordai gali būti perkelti į kompiuterį Excel formatu.

10p. • Prie prietaiso valdymo pulto yra automatiškai įkraunama akumuliatoriaus sistema. Ši sistema leidžia valdymo pultui ir terminiam spausdintuvui (jei yra) veikti 24 valandas, kai nutrūksta elektra.

10p. • Šaldiklis vaizdiniais ir garsiniais signalais įspėja, kai viršijama apatinė ir viršutinė temperatūros ribos, paliekamos atidarytos įrenginio durelės, atsiranda žemos įtampos ir/ar elektros atjungimo problemų.

• Šaldymo agente ir šaldiklio izoliacijoje nėra kenksmingų CFC dujų už OZONĄ.

• Prietaise yra du stabdomi ir du įprasti ratukai, kurie užtikrina lengvą nešiojimą.

6p. • Pagal vartotojo pageidavimą įrenginyje gali būti sumontuotas terminis spausdintuvas. Šiluminio spausdintuvu galima atspausdinti skaitmeninius įrašytus duomenis.

• Visi medicinos prietaisai, pagaminti Emsa A.Š. suteikiama 2 metų garantija.

• Visi mūsų gaminiai gaminami pagal ISO 9001:2008, TSE aptarnavimo vietos kompetencijos sertifikatus.

Mūsų gilūs šaldikliai turi CE sertifikatus.

3p.

- 10 metų duomenų įrašymas į USB.

- Nuotolinė prieiga per pasirinktą wifi, ethernetą arba rs232.

10p.

- Signalizacija; žema aukšta temperatūra, atviros durys, įspėjimai apie elektros gedimą.

- Veikimo klaidų kontrolės ir įspėjimo sistema (jutiklis, kompresorius, bendravimas)

10p.

- Yra nuotolinio signalizacijos prijungimo išėjimas.

- Momentinis temperatūros stebėjimas naudojant pasirinktą „Wi-Fi“, ethernetą ir

6p.

galimybė siųsti el. laiškus ir balso žinutes internetu

aliarmo atveju.
