Thanks to Regional Anesthesia

OPTIMIZE PROCESSES

Regional anesthesia is an essential part of pain therapy, as across several interventions, it offers clear advantages when compared to general anesthesia. ¹ For regional anesthesia to become an important part of the peri-operative process, there are some prerequisites to consider, like the relevant indications, skilled personnel and the necessary internal processes at the clinic.

The rapid growth of use of regional anesthesia and the numerous publications on the topic are both a testament to how regional anesthesia can have a positive impact on both patient outcome and on efficiencies for the clinic. ^{2,3}

WITH REGIONAL ANESTHESIA

WITHOUT REGIONAL ANESTHESIA

COMPARING TWO POTENTIAL INTERVENTIONS WITH AND WITHOUT REGIONAL ANESTHESIA:

Looking holistically across the patient pathway, the establishment of regional anesthesia processes appears to be a favorable investment. When regional anesthesia is used, patients see better outcomes, faster mobilization and consequently earlier discharge. ^{4,5}

Pain Therapy with Regional Anesthesia

Supported by B. Braun's Product Portfolio

B. BRAUN – A COMPETENT PARTNER
As one of the world's major providers in the area of regional anesthesia, B. Braun supports its customers with innovative products and services.

We strive to accompany our customers through the entire patient pathway helping to optimize their processes and to provide products adapted to day-to-day clinical needs.

SYSTEM PARTNER IN REGIONAL ANESTHESIA
B. Braun, as a true system partner, helps to stay on top of evolving standards and their realization across multiple stakeholders, e.g. nurses, pharmacists and anesthetists. With access to our comprehensive product portfolio in pain therapy and through constructive dialog, our partners can benefit from B. Braun's know-how and expertise.

Due to the combination of different procedures a broad regional anesthesia spectrum is created, which covers all patient areas.

Reducing Risks of Misconnections in Regional Anesthesia with NRFit®

MEDICAL DEVICE CONNECTORS FOR NEURAXIAL
& REGIONAL ANESTHESIA APPLICATIONS
ARE CHANGING TO MEET INTERNATIONAL
DESIGN STANDARDS: ISO 80369-6.⁶

Regional Anesthesia products with NRFit® connector

In line with the ISO Standard (International Organization for Standardization) for neuraxial and regional anesthesia devices, B. Braun has developed a comprehensive portfolio with NRFit® connectors for the corresponding process steps.

Connecting what belongs together

» The ISO has identified several medical application areas for which specific ISO standards have been developed. These standards are part of the ISO 80369 series. Each standard will provide design and performance specifications for these connectors.¹

SPINAL ANESTHESIA

A comprehensive portfolio of
needles in different bevel types
for spinal anesthesia.

Products for Spinal Anesthesia

Quality and Practicality

Thanks to our years of
EXPERIENCE
in the field, B. Braun offers spinal needles
with a range of bevel types.

Spinocan® and Pencan® are well accepted for their
INNOVATIVE
needle tip designs.

Ergonomic hub design for an individual and safe handling
position, better control of the needle and easy verification
of bevel eye orientation.⁷

CSF-flashback identification
due to the incorporated
prism effect.

Skaidri jungtis su
prizmės formos
likvoro
indikatoriumi, kuris
matosi visose
plokštumos

CSF FLASHBACK IDENTIFICATION

- Prism has a silver shine before CSF enters the hub **1**
- Prism turns transparent once CSF is in the hub **2**

Spinocan® with Quincke Bevel

- Sharp bevel for low puncture force⁷
- Fitted stylet: to reduce the risk of tissue coring and potential epidermoid tumor development
- Prism included in the spinal needle hub, supports identification of CSF flashback

Atraucan® with Two-Zone Bevel

- Low puncture force as well as minimal puncture trauma¹⁰
- Reduced risk of postdural puncture headache (PDPH)¹⁰

Pencan® with Pencil Point Bevel

- Pencil point tip and opening design allows avoidance of incomplete blocks and helps reduce PDPH⁸
- Minimal intrathecal penetration depth⁷
- Identification of tissue structures due to detectable dura click^{7,9}
- Prism included in the spinal needle hub, supports identification of CSF flashback

Spinal Introducer Needle

- Introducer needles providing needle guidance for the spinal needle during puncture⁷
- Introducer OHD range (as shown on left side)
- Introducer NHD range (as shown on right side)

EPIDURAL ANESTHESIA

To meet individual preferences, B. Braun offers a broad range of epidural cannulas, catheters and accessories for epidural anesthesia.

Products for Epidural Anesthesia

Quality and Practicality

Adapting to the unique anatomical challenges of each patient, it is important to use the appropriate needle and accessories.

B. Braun focuses on

QUALITY & PRACTICALITY.

plastikinis mandrenas

Perican® Tuohy Needles

- For both continuous and single-shot techniques
- Different needle sizes (16 G, 18 G, 20 G)
- With 1 cm graduation in length
- Polished inner bevel edge to reduce the risk of catheter shearing

USER BENEFITS:

- 1 cm marking to control the insertion depth
- High bending stiffness for good control during needle advancement
- Fitted stylet: to reduce the risk of tissue coring and potential epidermoid tumor development

Products for Epidural Anesthesia

Perifix® Catheters: with atraumatic tip: Standart, Soft and ONE

Perifix® Standard Catheter

- Relatively stiff catheter shaft for easy catheter insertion
- Length 1000 mm
- Standard catheter with a central opening or three micro-holes to enhance the spread
- One radiopaque stripe for x-ray control
- Clear blue length markings embedded in catheter material
- Does not contain latex, DEHP or PVC
- MRI conditional

Perifix® SoftTip Catheter

- SoftTip catheter with a superimposed tip
- Length 1000 mm
- Three micro-holes enhance the spread of anesthetic drug
- One radiopaque stripe for x-ray control
- Clear blue length markings embedded in catheter material
- Does not contain latex, DEHP or PVC
- MRI conditional

ilgio atžymos, atraumatinis su šoninėmis skylutėmis

Perifix® ONE

- Epidural catheter with a relatively stiff but flexible shaft and a soft, atraumatic tip
- Length 1000 mm
- Six micro-holes enhance the spread of anesthetic drug
- Three radiopaque stripes for x-ray control
- Does not contain latex, DEHP or PVC
- MRI conditional

Products for Epidural Anesthesia

Perifix® Accessories

Perifix® LOR-Syringe

- Easy-gliding plunger with good gliding characteristics and safety stop
- Parabolic graduation to differentiate it from conventional syringes
- Suitable for air and saline applications
- Lock or slip connection

Perifix® Filter with PinPad

- Filter fixation on patient in combination with self-adhesive PinPad
- Filter reduces the risk of bacterial infections
- Pressure resistant up to 7 bar

Perifix® Catheter Connector

- Available in two sizes (19 G and 20/24 G)
- Tactile and acoustic feedback upon closure
- Viewing window allows for catheter insertion control to ensure a successful connection

Perifix® Catheter Fixation

- Catheter fixation, consisting of fixation ring and non-woven cover foil
- Easy examination of puncture site due to exchangeable cover foils

Products for Epidural Anesthesia

Epidural Anesthesia for the smallest patients

Perican® Paed Epidural Needles

- Tuohy bevel
- For continuous or single-shot techniques
- Three different needle sizes (18 G, 20 G, 22 G)
- 5 mm markings to control the insertion depth
- Fitted stylets: to reduce the risk of tissue coring and potential epidermoid tumor development

Epican® Paed – Caudal Needles

- 23° Crawford type bevel for caudal pediatric anesthesia
- Three different needle sizes (20 G, 22 G, 25 G)
- Special length (30 mm, 35 mm, 50 mm)
- 5 mm markings to control the insertion depth
- Fitted stylets: to reduce the risk of tissue coring and potential epidermoid tumor development

Perifix® ONE Paed Epidural Sets

Perifix® ONE Paed epidural sets in 20/24 G for newborns and infants, and 18/20 G for older children:

- Catheters with distance markings for pediatric use
- For safe catheter insertion and position control
- Catheter with markings each 1 cm in the space between 2 and 20 cm from the needle tip

COMBINED SPINAL AND EPIDURAL ANESTHESIA

Combining the benefits of both techniques – sets for combined spinal and epidural anesthesia (CSE).

COMBINED SPINAL AND
EPIDURAL ANESTHESIA

Products for Combined Spinal and Epidural Anesthesia

Special Tuohy Needle with a back-eye in the curved tip and a Spinal Needle with a plastic centering sleeve

- Back-eye in tuohy needle for insertion of spinal needle
- Docking system to fixate the spinal needle
- Sleeved spinal needle for smooth exit through the back-eye

The ideal overlap of the spinal needle is by

Combined Spinal-Epidural Anesthesia (CSE):

THE BENEFITS

of Spinal and Epidural Anesthesia in the Espocan®-Sets

Markings on the Spinal Needle 1

The markings on the spinal needle show, when the tip leaves the back-eye.

USER BENEFITS 2

- The docking system allows rotation of the spinal needle even in the fixed position. Avoids the difficult and uncomfortable finger grip to steady fix the spinal needle in position
- The docking system ensures fixation of the spinal needle inside the tuohy needle after successful dura puncture and injection of the local anesthetic

Portfolio Overview

SETS FOR COMBINED SPINAL AND EPIDURAL ANESTHESIA

Espocan® and Perifix® Standard	Size (G) / Length (inch)	ø / Length (mm)	Units per box	Code no. (REF) Luer	Code no. (REF) NRFit®
	With Quincke-Bevel: Spinocan®				
	27 x 5"	0.42 x 125.5*	10	4556674	4556674N-01
	Pencil-Point Cannula: Pencan®				
	27 x 5"	0.42 x 127.5*	10	4556666	4556666N-01
All sets contain					
▪ Perifix® Standard catheter, 3 lateral eyes ▪ Perican® epidural cannula ø 1.30 mm, 18 G x 90 mm ▪ Perifix® LOR-syringe, Luer-Slip ▪ Perifix® epidural flat filter 0.20 µm ▪ Perifix® PinPad ▪ Perifix® catheter connector					

Espocan® and Perifix® Standard with Docking System	Size (G) / Length (inch)	ø / Length (mm)	Units per box	Code no. (REF) Luer	Code no. (REF) NRFit®
	With Quincke-Bevel: Spinocan®				
	27 x 5 3/8"	0.42 x 136.5*	10	4556747	4556747N-01
	Pencil-Point Cannula: Pencan®				
	27 x 5 3/8"	0.42 x 138.5*	10	4556763	4556763N-01
All sets contain					
▪ Perifix® SoftTip catheter, 3 lateral eyes ▪ Docking system ▪ Perican® epidural cannula ø 1.30 mm, 18 G x 90 mm ▪ Perifix® LOR-syringe, Luer-Slip ▪ Perifix® epidural flat filter 0.20 µm ▪ Perifix® PinPad ▪ Perifix® catheter connector

PERIPHERAL NERVE BLOCKS

Whatever option you prefer - wide ranged product portfolio for stimulated and Ultrasound guided peripheral nerve blocks.

Peripheral Nerve Block Portfolio

Quality and functionality without compromise

When performing a peripheral nerve block, there is no such thing as being too safe. Peripheral nerve blocks can be performed using different techniques and approaches. Electrical nerve stimulation, Ultrasound guidance and injection pressure monitoring can be used alone or in combination.

B. Braun's broad peripheral nerve block portfolio offers solutions for Ultrasound-only, dual guidance monitoring, and stimulation procedures.

ULTRASOUND
B. Braun offers a large product range of echogenic needles and catheters. Ultraline 360 is the latest generation of Ultrasound needles that combines enhanced Ultrasound visibility with smooth gliding properties and a good puncture quality.¹¹

NERVE STIMULATION
For the electrical nerve stimulation B. Braun provides a wide range of stimulating needle and catheter systems that address the users' needs. The well established nerve stimulator Stimuplex® HNS 12 completes the offer.

INJECTION PRESSURE MONITORING
The disposable BSmart® pressure monitor device objectively indicates the opening injection pressure in real time and allows for a more informed decision on how to proceed with an injection regardless of who performs the block. Using this technique can prevent injection into poorly compliant tissue (e.g. nerve fascicles).

Ultraline 360

Visibility without compromise – the next generations of Echogenic Nerve Block Needles

Circular (360°)
X-pattern-design

Reflection of the
Ultrasound waves

B. BRAUN ULTRASOUND NEEDLES – ULTRALINE 360:
The Ultraline 360 is B. Braun's latest generation of echogenic nerve block needles, featuring B. Braun's echogenic 360°X-pattern. The 'X' is a unique shape, which when combined with a clear coating, is intended to reflect more Ultrasound waves back to the probe than previous designs.¹¹

The X-pattern is applied as a segmented safety-code (long-short-short-tip) and facilitates the needle tip identification. The Ultraline 360 portfolio combines increased Ultrasound visibility with excellent tactile feedback and puncture characteristics.

NAVIGATION
For an easy identification of the needle tip, the X-pattern is strategically applied on the first 20 mm of the needle shaft to create the segmented code "long-short-short-tip". This enables distinction between the needle tip and the upper needle shaft.¹¹

- USER BENEFITS**
- **Navigation:** Safety code for identification of the needle and needle tip position
 - **Visibility:** 360° X-pattern and clear coating result in better Ultrasound visualization and tip identification compared to previous designs
 - **Tactile Feedback:** designed for consistent puncture – same 30° back-cut bevel as previous Stimuplex® Ultra and Ultraplex® needles

Products for Peripheral Nerve Blocks

Single Shot Needles

Stimuplex® and Ultraplex® single shot needles offer precision and ergonomomy and are designed for high success rates.

- USER BENEFITS
- Ergonomic needle hub design for enhanced tactile feedback
 - Excellent puncture and gliding characteristics (Stimuplex® D)
 - Broad portfolio of needle lengths from 35 to 150 mm and G 25 to G 20

Nerve Stimulation with the Stimuplex® HNS 12

1 Stimuplex® HNS 12 with SENSE

2 Stimuplex® Pen for cutaneous nerve mapping

B. Braun Nerve Stimulator – Stimuplex® HNS 12 with SENSE

What is SENSE?

In practice, marginal needle movements often lead to losing the muscle twitch. The SENSE technology (Sequential electrical Nerve Stimulation) is a sequence of two fixed impulse durations of 0.1 ms along with a third longer impulse duration.¹³ Most traditional nerve stimulators emit two very short pulses every second. That's because short pulses improve accuracy or specificity when closer to the nerve. The downside is that sensitivity, or the availability to elicit visual feedback at a distance from the nerve, is lost. SENSE technology increases both sensitivity and specificity by adding a third, longer pulse. This results in eliciting a motor response even when the needle is far from or not aimed directly at the nerve and requires less adjustment to the amperage control while remaining the visual feedback.

USER BENEFITS

- Stimulation with SENSE-technology designed for more efficient nerve stimulation¹³
- Menus designed for easy control of sound and other settings
- Acoustic signals inform the user of any relevant deviations

As the needle is advanced, SENSE generates two short and one long pulse. From the alternating sequence of three impulses, the third longer impulse stimulates the nerve already at a distance. One muscle twitch is visible and indicates that the needle is directed to the nerve.

The stimulation needle is further advanced towards the nerve while SENSE maintains the motor response. Current strength adjustments lead to definite reductions of the third impulse.

At the threshold level of approximately 0.5 mA three muscle twitches are visible as all three impulses stimulate the nerve.

Products for Peripheral Nerve Blocks

Injection Pressure Monitoring with BSmart®

Reprinted with permission from www.nysora.com

Injection Pressure Monitoring

Accidental injection of local anesthetic into fascicles of peripheral nerves can result in permanent nerve injury.⁷ Research has shown that high opening injection pressure (> 15psi) consistently detects needle-nerve-contact¹ or indicates intrafascicular injection. Therefore, avoiding injection with high opening injection pressure (> 15psi) can prevent injection into poorly compliant tissue (e. g. nerve fascicles).^{18, 19, 20, 21, 22}

USER BENEFITS

- Objectively measures and displays injection pressure
- Color coding visualizes the pressure information
- Allows consistent monitoring of resistance to injection regardless of who performs the actual injection²³

Injection Pressure

< 15psi / 103kPa	15–20psi / 103–138kPa	> 20psi / 138kPa

Examples of low opening injection pressure (< 15psi):

- 1 Needle tip placed perineurally^{14, 15}
- 2 Needle tip placed sub-epineurally in adipose tissue between fascicles^{15, 16}

Examples of high opening injection pressure (> 15psi):

- 3 Needle-epineurium contact (needle-nerve-contact)¹⁴
- 4 Needle-perineurium contact (needle-nerve-contact)^{14, 15, 16}
- 5 Needle tip placed intrafascicularly^{14, 15, 17}

BSmart®

The BSmart® Injection Pressure Monitor is an easy-to-use inline injection pressure monitoring device providing clinicians with objective pressure information. This happens through a coloured piston, which climbs into the gauge depending on the pressure. BSmart® Injection Pressure Monitor does not interfere with the tactile feedback of the syringe which has been traditionally used to assess the resistance of injection during nerve block procedures.

ULTRASOUND GUIDANCE

Reimagine Regional Anesthesia
with B. Braun's innovative portfolio
for Ultrasound guided therapies.

Xperius® Ultrasound System

Responsive | Advanced | Simple

Xperius® is a new Ultrasound system jointly developed by B. Braun and Philips which has been specifically designed to support the current and future needs in regional anesthesia and vascular access at the point of care.

RESPONSIVE

The system offers a high degree of mobility and flexibility combined with an ergonomic design to improve daily practice. A fully articulating arm allows easy adjustments of the Ultrasound monitor position and the angle of the screen for ergonomic use and better line of sight. Besides the cart based system, a dedicated ultra portable tablet device allows quick bedside scanning or interventions in your facility, on-the-go and at satellite locations.

ADVANCED

Xperius® provides high quality imaging of nerves and tissue structures for confident diagnoses and precise needle guidance. The predetermined settings (presets) are designed so you can spend less time adjusting controls and more time focusing on your patients.

SIMPLE

Xperius® – Allows you to quickly and comfortably conduct exams. Xperius® comes with intuitive touch and gesture controls that you already know from your smart devices – to keep your focus on your work and not on the controls. Its simple interface supports daily routines and provides specific presets for procedures in regional anesthesia and vascular access.

Designed around you to fit seamlessly into the anesthesiologists' care area

- ✓ Advanced ergonomics
- ✓ Convenient accessory bins
- ✓ High mobility & portability
- ✓ Designed by Philips & B. Braun

High performance technology delivers exceptional image quality

- ✓ High definition imaging
- ✓ Enhanced needle visualization
- ✓ New generation of probes

Intuitive and easy to use

- ✓ Improved workflow
- ✓ Intuitive user experience
- ✓ Touch screen & gesture control
- ✓ Dedicated regional anesthesia & vascular access presets

Intuitive Interface & Advanced Technology

-  Multiple presets - 4 specific ones for regional anesthesia / vascular access
-  Intuitive touchscreen
-  Start scanning in a few seconds
-  Built-in Wi-Fi for DICOM data transfer
-  Needle Vis Technology

Ready-to-go for Bedside Scanning

-  Long lasting battery up to 3 h of scanning
-  Lightweight and easy to handle

Articulating Arm

-  Flexible rotation in every direction
-  Height-adjustable

Core Ultrasound Technology

-  Transducer with USB connector

Convenient Storage

- Everything needed for procedures is within reach

Onvision® Needle Tip Tracking

Accurate | Predictable | Empowering

Onvision® is an Ultrasound based Needle-Tip tracking technology for peripheral nerve blocks which works exclusively with the Xperius® Ultrasound system and the dedicated Stimuplex® Onvision® needle. In real-time, Onvision® accurately indicates where the needle tip is inside the body, both in and out of plane. It helps users align the needle with the probe in an intuitive and easy to use manner – to improve pain relief and the avoidance of unintended nerve puncture or collateral damage to surrounding tissue or vessel.

Onvision® is an Ultrasound based Technology for reliable Needle Guidance
The dedicated Stimuplex® Onvision® needle is embedded with a tip sensor, which allows accurate detection of the tip location and displays this information in real time on the live Ultrasound image.

With Onvision®, users experience a real time guidance which empowers them to quickly adopt and integrate PNB into their daily practice. Onvision® enables more physicians to be proficient in performing PNBs.²⁷

ACCURATE

- Know where you are in real-time^{24, 25}**
- ✓ Tip visualization in both superficial and deeper blocks
 - ✓ Ultrasound based detection and accuracy
 - ✓ Can reduce complications during PNB placement
 - ✓ Designed to prevent unintended overshooting

PREDICTABLE

- Helping make first-time-right the new standard^{24, 25}**
- ✓ Confidently perform local anesthetics injection
 - ✓ Reduction in overall procedure time
 - ✓ Fits in to current workflow (no workflow disruption)

EMPOWERING

- More anesthesiologists can carry out regional anesthesia²⁶**
- ✓ Intuitive user experience
 - ✓ Easy to adopt
 - ✓ Can increase proficiency level

Needle Tip Navigation to the Point

The Onvision® technology combines ultrasound image data from the ultrasound system with signals from the needle to accurately locate the position of the sensor on the Stimuplex® Onvision® Needle. The position of the sensor is then displayed on the ultrasound image in real-time by overlaying a circle to it.

Ultrasound based Technology to improve Accuracy

- Onvision works up to at least 10 cm depth^{1,4}
- Onvision is shielded against external electromagnetic interferences (EMI)³
- Onvision remains accurate even when the needle bends⁴

EZCOVER®

Ultrasound Probe Cover Set

EZCOVER®. Because infection control matters.
Infection prevention and control are key priorities in the healthcare setting. Although ultrasound is considered one of the safest imaging modalities, infection transmission risks during ultrasound are evident.²⁸ The use of a sterile sheath and gel for interventional ultrasound is an important way to prevent cross-contamination and reduce the risk of healthcare-associated infections.²⁹

EZCOVER®. Improved protection for patient, user and equipment.
EZCOVER® are sterile, latex-free and ensure maximum protection for the patient, the user and the equipment. EZCOVER® are suited to all sterile and non-sterile ultrasound applications.

- All sets include
- Ultrasound probe cover – available in different sizes (W x L) 15 x 30 cm | 15 x 61 cm | 15 x 122 cm | 15 x 244 cm
 - Sterile ultrasound gel (1 x 20g)
 - Latex-free rubber fixation bands (2 x)
 - Blue sterile drape (30 x 30 cm)
 - All versions optional available with STOP Safety Shield

Easy to fit and convenient to use.
The telescopic folding allows for sterile application. Clear instruction labels on the cover decrease the risk of errors and misuse.

Image quality without compromise.
The high-quality material of the soft sleeve emulates the properties of human tissue. The elastic material facilitates wrinkle and air free application for distortion free scanning.

EZCOVER® advantages at a glance:

IMPROVED PROTECTION

- Latex-free
- Approved for intraoperative use
- Reduces risks of procedural errors (STOP Safety Shield)

EASY TO FIT – CONVENIENT TO USE

- Improved handling
- Elastic material – conforms to all probes
- All necessary components for immediate use in one set

ADVANCED PERFORMANCE

- Soft and comfortable material
- Wrinkle and air-free fit
- No compromise in image quality

NEW! Stop before you block.
Wrong site nerve blocks (WSNB) are classified as never events. A nation-wide patient safety campaign in the UK called “Stop before you block” is aimed at reducing the incidence of inadvertent wrong-sided nerve blocks during regional anesthesia.³⁰

EZCOVER® are available with STOP Safety Shield label. The sticker reminds the practitioner to STOP immediately prior to the start of the procedure and to conduct a final confirmation on the right surgery site and side of the block.

- BENEFITS**
- Assures compliance with the WHO Checklist (JCI Standards IPSG4 and IPSG.4.1)
 - Reduces risks of wrong site nerve blocks

Portfolio Overview

ULTRASOUND SYSTEM AND ONVISION® TECHNOLOGY

Xperius®	Description	Units per box	Code no. (REF)
Xperius® Cart System with 1 transducer L12-4 and Onvision® Needle Tip Tracking Technology			
	- Type of unit: Compact Cart based Point of Care Ultrasound System with Linear L12-4 and Onvision® Technology - Dimensions: 132.5 cm x 56.0 cm x 66 cm (H/W/D) - Weight: 36.0 kg - Display: 39.6 cm (15.6 in) flat-panel touch-screen - Imaging mode keys: 2D, Color Doppler, Color Power Angio (CPA), M-Mode	1	NUSM621
Xperius® Cart System with 1 transducer L12-4			
	- Type of unit: Compact Cart based Point of Care Ultrasound System with fully articulating arm and Linear L12-4 - Dimensions: 132.5 cm x 56.0 cm x 66 cm (H/W/D) - Weight: 34.0 kg - Display: 39.6 cm (15.6 in) flat-panel touch-screen - Imaging mode keys: 2D, Color Doppler, Color Power Angio (CPA), M-Mode	1	NUSM623
Xperius® Stand-alone Tablet with 1 transducer L12-4			
	- Type of units: Point of Care Tablet Ultrasound System with Kickstand and Linear 12-4 - Dimensions: 28 cm x 42 cm x 5 cm (H/W/D) - Weight: 3.6 kg	1	NUSM626
Peripherals			
	- Printer Sony UP-D711MD - High-quality digital graphic printer - Easy to connect within dedicated Xperius® printer slot - Dimensions: 7 cm x 14 cm x 12.5 cm (H/W/D) - Weight: 1 kg - Monochrome, black/white, A7 paper size	1	NUSM620

COMPLEMENTARY PRODUCTS

Xperius® Upgrade Items	Description	Units per box	Code no. (REF)
Single Transducer Linear			
	L12-4 broadband linear array transducer 12 to 4 MHz extended operating frequency range - Aperture size: 34 mm - High resolution imaging for shallow applications - Center line marker - USB transducer with replaceable cable	1	FUS5716
Single Transducer Curved			
	C5-2 broadband curved array transducer 5 to 2 MHz extended operating frequency range 50 mm radius of curvature - High resolution imaging for deeper applications - Center line marker - USB transducer with replaceable cable	1	FUS5712

ONVISION® SINGLE SHOT BLOCK NEEDLES

Stimuplex® Onvision®	Needle ø (G) and Length (inch)	Needle ø and Length (mm)	Units per box	Code no. (REF) Luer

	20 x 6"	0.90 x 150 mm		4892715NR-01

ELASTOMERIC PUMP SYSTEMS

Elastomeric pump systems for post-operative pain therapy with peripheral nerve block or epidural catheters.

ELASTOMERIC PUMP
SYSTEMS

ON-Q® Elastomeric Pump Systems for Continuous Regional Anesthesia

- USER BENEFITS

 - Convenient and strong soft shell design allowing for increased patient comfort
 - Reliable and silent infusion without complicated electronics

ON-Q® – Pump Systems for Continuous Regional Anesthesia

The ON-Q® Elastomeric Pump System is a pain management solution that has been clinically proven to reduce pain and opioid consumption when used to deliver local anesthetics to or around surgical wound sites or in close proximity to nerves, when compared to narcotic only pain management.³¹ Patients receiving ON-Q® in combination with the potential benefits of a continuous nerve block can experience faster mobilization and a quicker return to their home environment.^{32,33,34}

A product range with fixed flow rate pumps, Select-A-Flow™ for variable flow rate, and bolus devices allow you to choose

the right pump for a patient individual post operative pain therapy. ON-Q® Elastomeric Pump Systems work without complicated electronics, thus avoiding problems with batteries, maintenance, safety checks. Also, there is no need for complex staff training.

Hospitals or healthcare providers can at the same time benefit from reduced length of stay and increased patient satisfaction.^{35,36}

ON-Q® Bolus

Select-A-Flow™

Refill Indicator:
Indicates to the patient when the next bolus can be administered.

Safe and simple bolus administration allows the delivery of a continuous fixed basal rate with an additional bolus option for patient adjusted pain relief. Different articles, offering either 30 or 60 min refill time options are available to effectively manage the occurrence of breakthrough pain sensations.

The Select-A-Flow™ controller which is available in two different configurations (1-7 ml/h and 2-14 ml/h), allows flow rate adjustments according to patient individual pain relief requirements.

- USER BENEFITS

 - Ergonomic bolus button design
 - Easy to read reservoir fill indicator
 - Bolus pump is designed for optimal pain management and incisional applications

- USER BENEFITS

 - Flow rate adjustment in 7 steps
 - Rate-changing key may be removed to discourage tampering

Portfolio Overview

CONTINUOUS WOUND INFUSION

Pain therapy on site –
catheter systems for
continuous wound infusion.

ON-Q® Elastomeric Pump Systems for Continuous Wound Infusion

ON-Q® Pain Relief System

Continuous wound infusion is a technique that delivers local anesthetic through a multi-hole fenestrated catheter to or near the surgical site for post-operative pain relief.³⁷ It provides an effective postoperative pain management, decreases pain and discourages opioid use.

The simple approach of placing a Soaker Catheter™ to infuse local anesthetic into or near the incisional site can be widely used and offers the potential to provide complete analgesia, while reducing the need of opioids and their associated side effects.³¹

ON-Q® Tunneling System

The blunt tunneling system which is provided with a tear-away sheath helps to place the Soaker Catheter™ in the sub-fascia, extra-pleural or intramuscular layers, allowing access to the key nerve bundles.

The Silver Soaker Catheter™ comes with an additional silver coating that works as an antimicrobial agent.

ON-Q® SilverSoaker™ Catheter with Silver-Ions-Coating on both sides

ON-Q® Soaker Catheter™

- FEATURES AND USER BENEFITS
- Unique catheter design with multiple lateral holes along the infusion segment
 - Easy to use catheter with introducer needle with peel-away sheath
 - Length markings for more accurate positioning
 - Dual catheter systems available
