

## Consumable sterile kits

### I. Mother solution kit: POSIKIT 1B

POSIKIT 1B is a sterile kit called "FDG MOTHER SOLUTION CONNECTION" for preparing the FDG dose to be injected into the patient. This kit is common to several patients. It must be replaced after each unloading cycle of the Posijet®.

This kit is composed of a cartridge (set of elements common to several patients) in turn composed of:

- A 3-way stopcock;
- A membrane seal;
- An unsleeved needle (L = 100 mm);
- A Y circuit;
- An anti-siphon valve;
- A catheter with a NaCl bag spike;
- A non-return valve;
- A drip-stop connector;
- A BD 10 ml syringe with sleeved needle (L = 120mm);
- An extension tube;

The Posijet® common sterile kit is supplied by Lemer Pax. No other sterile kit is to be used in the Posijet®.

Service life: Comply with the expiry date indicated on the label.

## II. Vial venting kit

To dilute the mother solution vial, a vial venting kit is required.

The venting kit is not supplied by Lemer Pax. However, Lemer Pax has tested and approved the following references for use in Posijet®:

- Millex-GV Syringe Filter Unit, 0.22 µ - ref. SLGV013SL;
- B BRAUN hypodermic needle - ref. 0.90x70mm BL-LB.

## III. Patient kit: POSIKIT 2

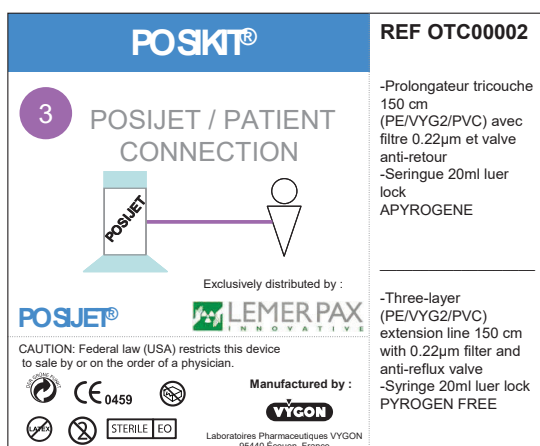

POSIKIT 2 is a sterile kit called "POSIJET/PATIENT CONNECTION" for connecting the Posijet® to the patient kit. This kit is specific to each patient. It must be changed after each patient injection.

This kit comprises:

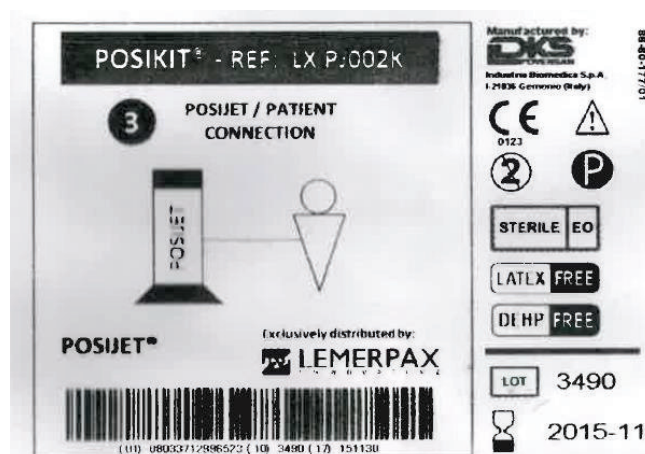

- An extension tube;
- A 0.22 µ filter;
- A bubble trap;
- A non-return valve;
- A purge liquid collection syringe.

Service life: Comply with the expiry date indicated on the label.
