

3 pirkimo dalis- Nosies švirkštas

LMA MAD Nasal™ Needle-free intranasal drug delivery device.

The unique design of LMA MAD Nasal™ enables a seal to be formed with the nostril and atomized particles of medication to be delivered to the nasal mucosa. The particles are then absorbed through the mucosal tissue and into the bloodstream, avoiding first pass metabolism.

Time from presentation to the paediatric ER department to analgesia was significantly reduced with IN vs IV drug delivery ($p < 0.000$).¹

IN vs IV drug delivery

Within a few minutes of delivery, serum levels of some medications delivered intranasally are comparable to injectable levels.²

IN vs PR drug delivery

With LMA MAD Nasal™, seizure medication can be administered intranasally:

- ▶ Significantly reduces the likelihood of recurrent seizures in the ED³
- ▶ Significantly reduces the need for additional medication to treat ongoing seizures³
- ▶ Avoids the embarrassment associated with rectal drug delivery²

IN vs IM & Oral drug delivery

Utilising low molecular weight lipophilic drugs intranasally ensures that molecules are easily absorbed across the nasal mucosa for comparable efficacy vs IM and oral drug delivery.^{4,5,6}

“The intranasal route of administration presents several advantages in small children. It is easily administered to a reluctant child, cannot be spit out and allows a more rapid absorption than when given orally.”

Talon M. et al., 2009

Vaistai įpurškiami dulksnos pavidalu

minkštas kūgio formos kamštis

Soft conical plug

The plug forms a seal with the nostril preventing expulsion of fluid.

Malleable stylet

The malleable stylet allows 180° positioning of the nasal plug.

lankstus stiletas, keičia padėtį 180 laipsnių kampu

Accurate dosing

The syringe enables the accurate measurement of drugs to be delivered.

Atomization spray

The spray atomizes drugs into a fine mist of particles 30-100 microns in size.⁴

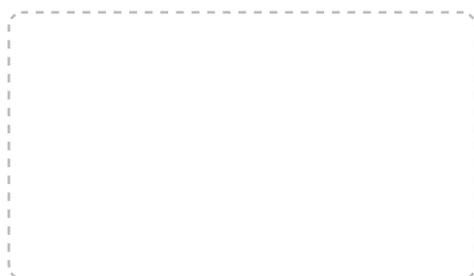

Pressure

High applied pressure ensures that drugs are atomized into a fine mist of particles through the tip of the plug.

Nosies švirkštas, skirtas leisti vaistus

Unikalus LMA MAD Nasal™ dizainas leidžia užkimšti šnervę ir į nosies gleivinę įpurkšti vaistų daleles, kurios yra sugeriamos per gleivinę, išvengiant pirmojo prasiskverbimo efekto.

Suskaldytų dalelių įpurškimas

Vaistai yra įpurškiami 30-100 mikronų dydžio dalelėmis dulksnos pavidalu.¹

Minkštas kūgio formos kamštis

Kamščiu užkemšama šnervė, taip išvengiant skysčių ištekėjimo.

Lankstus stiletas

Lankstusis stiletas leidžia nosies kamščio padėtį keisti 180° kampu.

Tikslus dozavimas

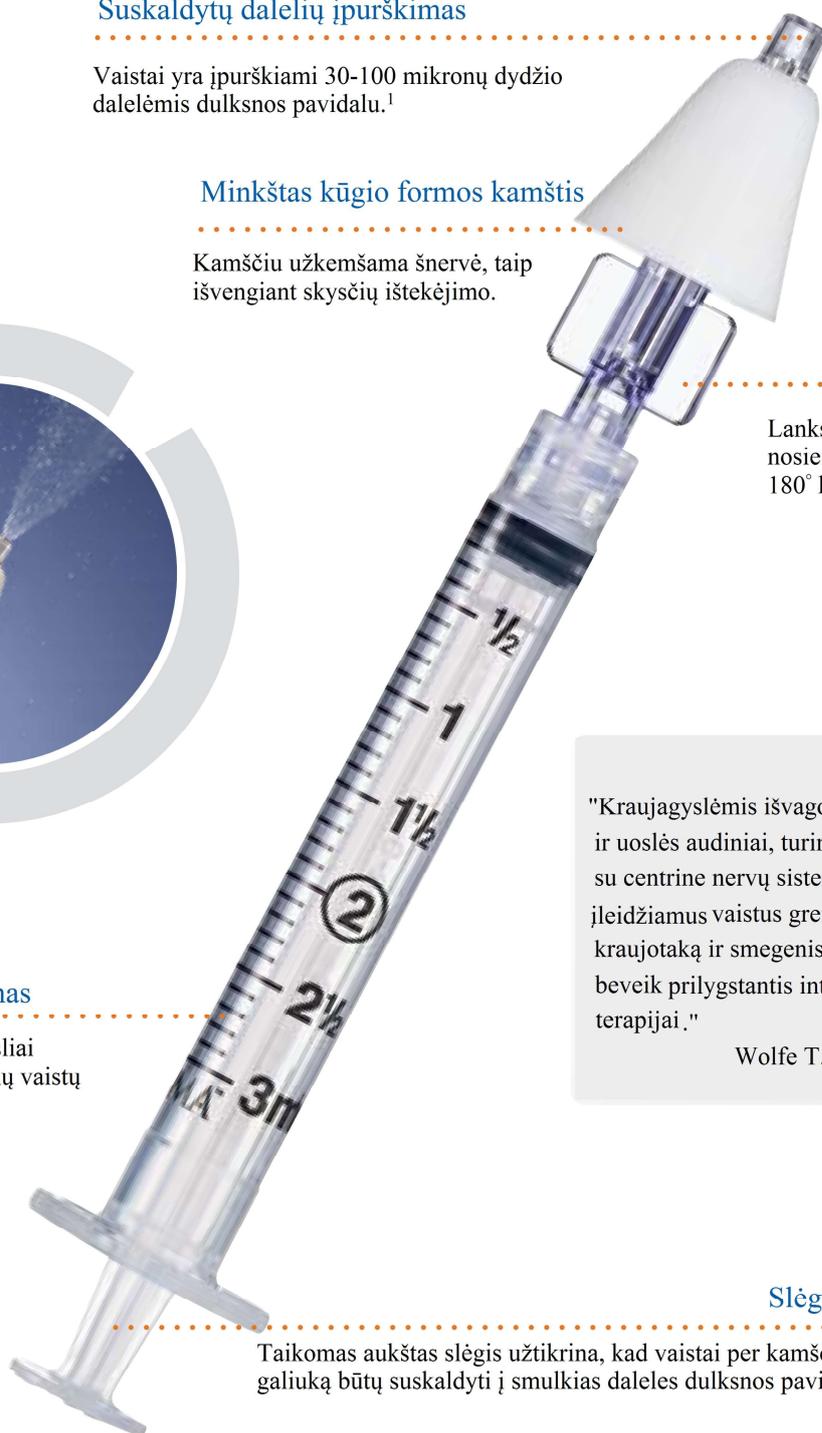

Švirkštu galima tiksliai išmatuoti įpurškiamų vaistų kiekį.

"Kraujagyslėmis išvagota nosies gleivinė ir uoslės audiniai, turintys tiesioginį ryšį su centrine nervų sistema, leidžia per nosį įleidžiamus vaistus greitai pernešti į kraujotaką ir smegenis, šiuo atžvilgiu beveik prilygstantis intraveninei terapijai."

Wolfe T. & Braude D., 2010

Slėgis

Taikomas aukštas slėgis užtikrina, kad vaistai per kamščio galiuką būtų suskaldyti į smulkias daleles dulksnos pavidalu.

12pd- Tracheostominių vamzdelių fiksatorius: mažas, vidutinis, didelis

Product features

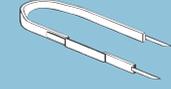

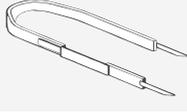

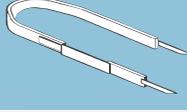

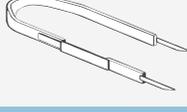

- For securely holding a tracheostomy tube, a laryngectomy tube or a Stoma button with eyelets in place
- Provide an optimum wearing comfort, as they are made of soft, skin-compatible material (soft fabric, foam, Polyurethan (PU))
- Available in different widths and with different fasteners (hook and slide (narrow and wide), velcro fastener, velcro/ hook)
- Individually adjustable
- Variants for adults and children
- PRIMEDIFIX® with hook enables fast fixation to the eyelets of a tube flange or Stoma Button (A-E)
- PRIMEDIFIX® with velcro fastener is especially suitable for sensitive skin (F-I)

- EASYFIX® with Velcro fastener on one side and a hook on the other enables even motor impaired patients (e.g. after a stroke) to easily fix the neck strap to a tube or stoma button, even with just one hand (J-M)

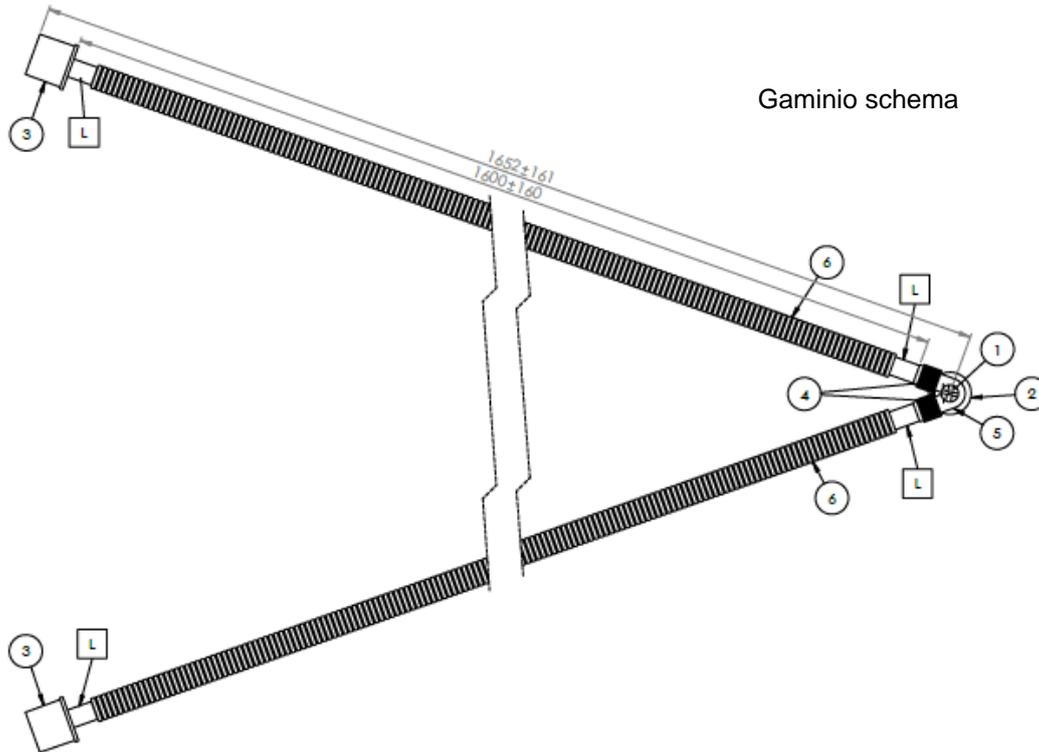

Indication

- Tracheostomy/ Laryngectomy
- Radiation/ MRI

1. Product Name and Product Code:

AL-1700.V005- Neonatal Anesthesia Circuit Corrugated PE Tube
Kvėpavimo sistema naujagimiams

**2. Manufacturer:**

Altera Tibbi Malzeme Sanayi ve Ticaret A.Ş.

3. Sterilization Method :

Ethylene oxide sterilization. This product line is provided both as sterile and nonsterile.

4. Packaging:

Nylon packaging. ISO Class 8 Clean Room Manufactured

5. Intended Use and Functional Description :

Disposable circuits used to conduct medical gases from the anaesthesia system to the patient. Anaesthetic gas exits the anaesthesia machine (via the common gas outlet) and then enters a breathing circuit. The function of the circuit is to deliver oxygen and anaesthetic gases to the patient and to eliminate CO₂. The CO₂ may be eliminated by gas inflow or by soda lime absorption.

6. Shelf life :

5 years from the date of production .

7. Product Description:

7.1. Classification: Class IIa Rule 2

7.2. This product does not contain any metallic parts

7.3. Spesification of the product :

Component PN	Component Description	Qty.	UoM
150.11.036	ELBOW CONNECTOR LUER CAPalkūninė jungtis su dangteliu	1	Pcs.

Jungtus su CO₂ anga

Sistemos ilgis 160cm , 10mm diametras (2 gofruopti vamzdžiai)

8. Standarts:

EN ISO 13485:2003, 93/42/EEC Medical Device Directive, EN ISO 5367, EN ISO 5356-1, EN ISO 11607-1:2009, EN ISO 11607-2:2009, EN ISO11135-1:2007, EN ISO 23328-1, EN ISO 23328-2, EN ISO 594-1

9. Waste Method:

After use product will be “contaminated medical waste” and package will be “packaging waste” so they should be handled according to relevant national and international standards and regulations.

Date: 19.03.2020

STATEMENT

To whom it may concern,

We are producing different modifications of breathing circuits in accordance with international standards in the direction of customer demands.

MADgic

Laryngo-Tracheal Mucosal Atomization Device
To support smooth emergence from anesthesia,
difficult and awake intubations.

A versatile choice to administer topical anesthesia* to the upper airway.

The MADgic Laryngo-Tracheal Mucosal Atomization Device from Teleflex provides clinicians with the ability to deliver atomized topical anesthesia directly to the airway mucosa. This helps to suppress the airway responses to emergence phenomena such as coughing or laryngospasm^{1,2} and to reduce the cardiovascular responses to mechanical stimulation of the airway³. Topical anesthesia administered by the MADgic Device supports increased patient compliance during difficult and awake intubations⁴.

Coverage, Comfort, Convenience

The MADgic Device allows for optimal coverage by enabling a gentle dispersion of atomized particles across a broad area of the airway mucosa. The malleable stylet allows for targeted

delivery of medication to the deeper pharyngeal structures and to the glottis⁵.

The MADgic Device provides enhanced patient comfort by allowing less stressful intubation and extubation⁶. It also helps to reduce the risk of patient injury by featuring a convenient narrow profile designed to comfortably fit through the vocal cords, into the nasal cavity, or down a supraglottic airway device.

Safety

The single-use MADgic Device enhances patient safety by helping to reduce the risk of cross-contamination while also helping to reduce the risk of toxicity by facilitating exact dosing.

Benefits

The Clinician
Help in managing emergence issues and difficult airway intubation.

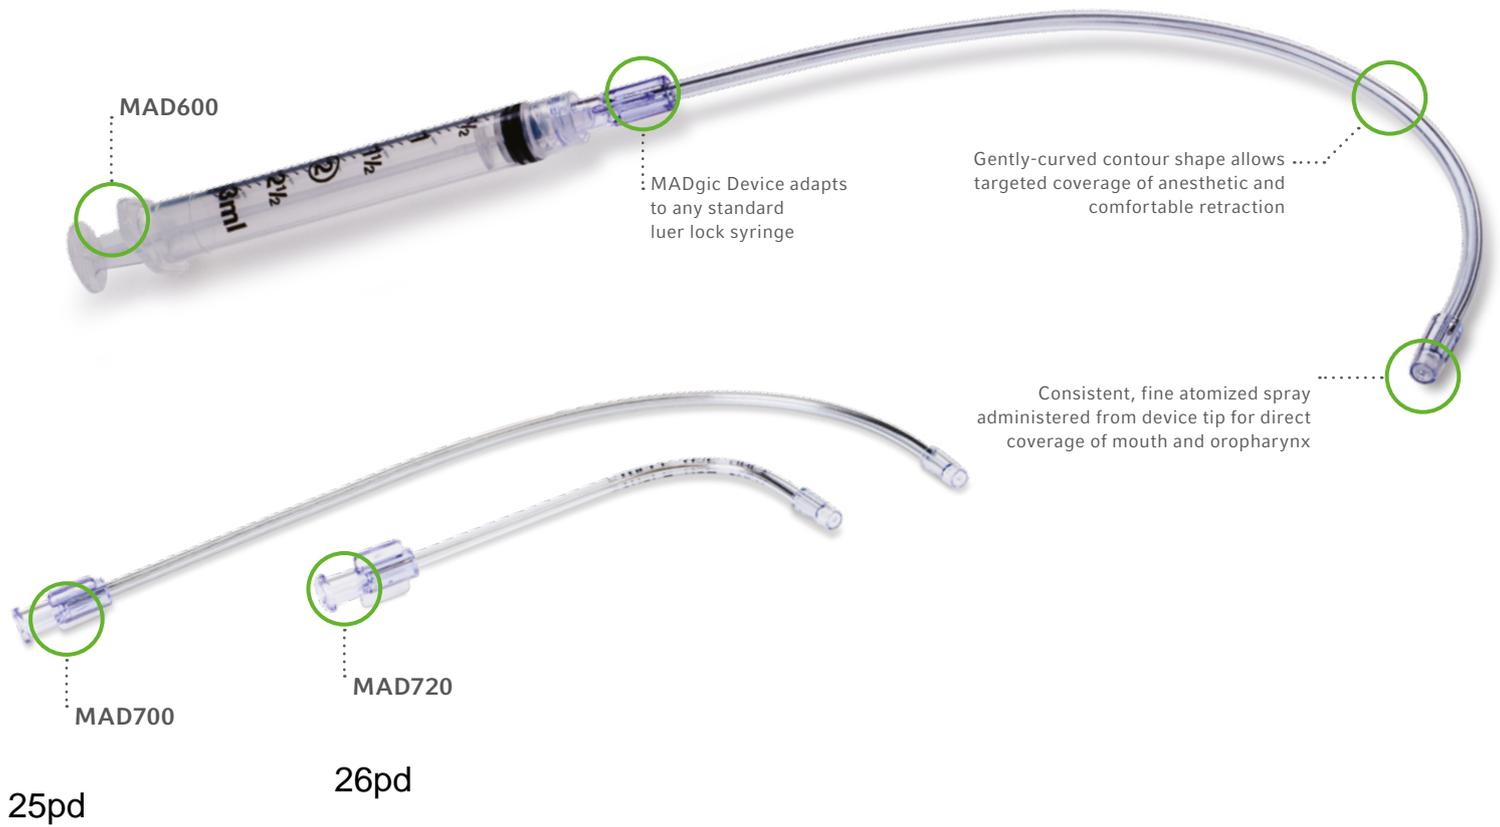

Your Institution
Single-use reduces risk of cross-contamination.

The Patient
Increase patient comfort and reduced risk of patient injury.

* For use with drugs approved for intranasal and oropharyngeal delivery.

Strength in Details

29 pd- Sistema invazinio kraujo spaudimo matavimui

Clinically, blood pressure is of fundamental importance in the physiological parameter for humans. For critical patients, a subtle change in blood pressure may be the harbinger of a developmental trend. Therefore, Antmed uses the world's leading pressure chip, combined with our high-end manufacturing processes, because, we understand, the slightest change in blood pressure may be an indication of something critical.

Vienkartinė sistema invazinio kraujo spaudimo matavimui

Disposable Pressure Transducers

• Single Channel DPT

• Double Channel DPT

• Triple Channel DPT

• Single Channel DPT (Precision Flush Device)

• Single Channel DPT (Arterial and Venous pipeline)

• Single Channel DPT (Self-flush valve)

Blood Sampling System

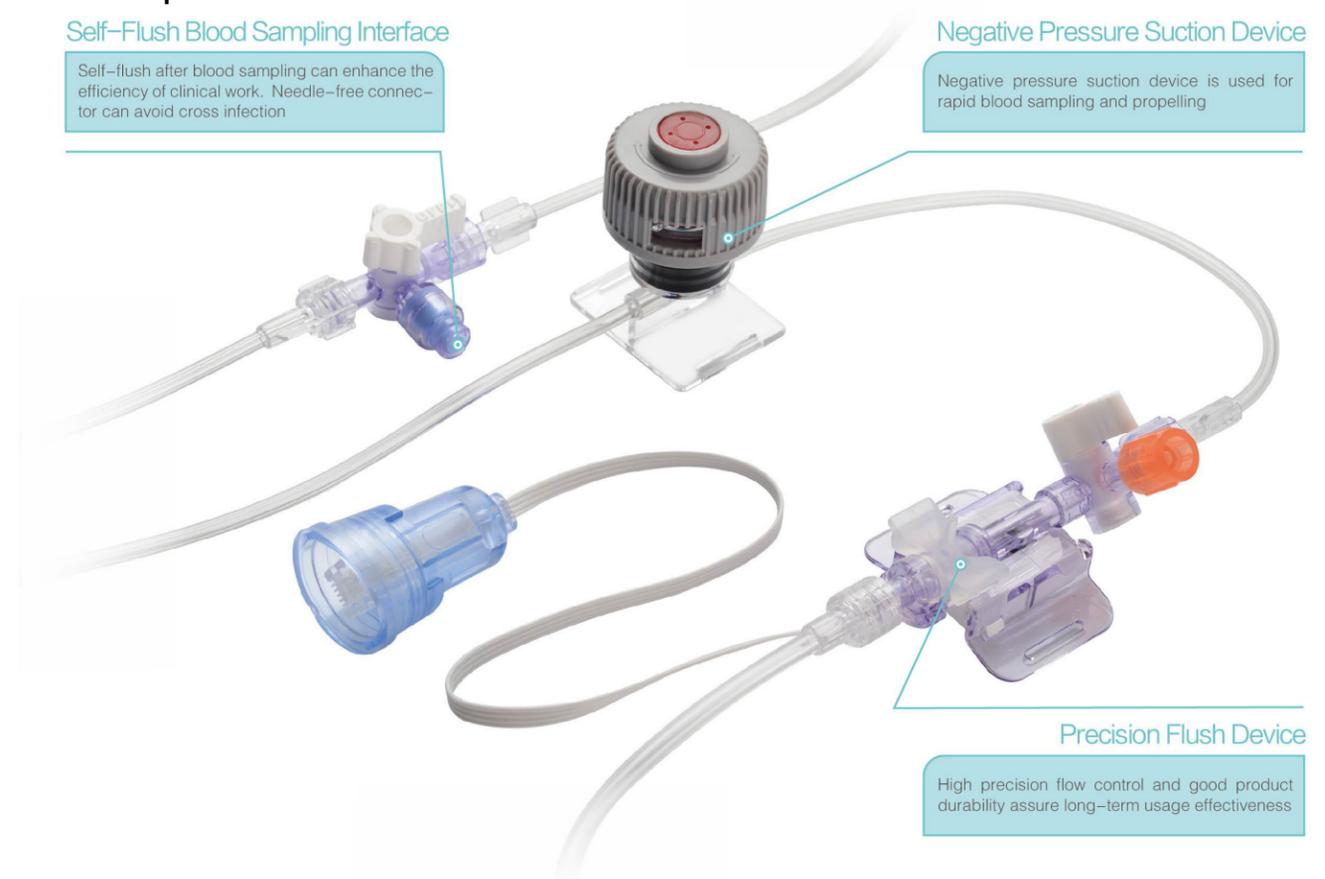

Praplovimo vožtuvas

Self-Flush Blood Sampling Interface

Self-flush after blood sampling can enhance the efficiency of clinical work. Needle-free connector can avoid cross infection

Negative Pressure Suction Device

Negative pressure suction device is used for rapid blood sampling and propelling

Precision Flush Device

High precision flow control and good product durability assure long-term usage effectiveness

Į rinkinį įeina:

- Infuzinė sistema
- Praplovimo vožtuvas (3 ml/h greičiu)
- Daviklis
- 3 krypčių kranelis
- Aukšto slėgio linija
- Aukšto slėgio prailginimo linija

Single/Double/Triple available

技术参数:

- 压力电阻硅芯片, 符合美国AAMI BP22标准
- +/-20mmHg零压输出
- -50~300mmHg使用压力范围
- 4.95~5.05uV/V/mmHg灵敏度
- 168小时使用寿命保证
- 输入电压: 2~10伏直流
- 保存温度: -18~60℃
- 操作温度: +10~+40℃
- 过压保护: -400~6000mmHg
- 3毫升、30毫升/小时或无冲洗阀, 三种选择
- 环氧乙烷灭菌

SPECIFICATIONS:

- Fully piezoresistive silicon pressure sensor, AAMI BP22 compliant
- +/-20mmHg Offset
- -50~300mmHg operating pressure range, Customized pressure range
- 4.95~5.05uV/V/mmHg sensitivity
- 168 hours operating life
- Supply Voltage: 2~10 VDC
- Storage Temperature: -18~60℃
- Operating Temperature: +10~40℃
- Overpressure: -400~6000mmHg
- 3cc, 30cc/hr or without flush device
- ETO sterilization

30pd- Epidurinė adata Tuohy tipo 18 G 120 mm

EpiLong Tuohy

The Tuohy cannula in this kit is equipped with a plastic stylet, making it correspondingly less expensive. The standard epidural catheter is optionally available with closed tip and three lateral openings or with a central opening.

Epidural anaesthesia

spinal anesthesia needles

31 pd- Spinalinè adata Quincke tipo 22 G 120 mm

New Hub Design

Tulip Design

Atrau-com®

- Multi-angle grinded tip with special bending
- Extra thin wall
- Atraumatic

pencil point

- Perfect conic elliptical bevel enables easy access to desired location, without cutting or harming tissues.

quincke tip

- Quincke bevel is formed using state of the art technology. Smooth needle point ensures easy insertion into tissues.
- Perfect matching of stylet and needle bevel prevent coring. Angular tip prevents tissue damage.
- Crystal clear needle hub enables monitoring fluid flow and helps to keep CSF loss at a minimum level.
- Thin wall needle lets faster fluid flow.

* Please check page 11 for details.

Spinalinės anestezijos adatos

Atraucom tipo

- Daugiakampių galiuku, specialiai išlenkta
- Ypač plona sienele
- Atraumatinė

Pieštukinės

- Ideali konusinė eliptinė nuopjova leidžia lengvai pasiekti lokaciją be pjovimo ir audinių pažeidimų

Quincke tipo galiuku

- Quincke nuopjova suformuota specialia technologija
- Tolygus adatos galiukas užtikrina lengvą įvedimą
- Idealiai suderintas stiletas su adatos nuopjova. Kampuotas galiukas apsaugo audinius nuo pažeidimų
- Itin skaidri adatos jungtis leidžia stebėti skysčio tekėjimą ir padeda palaikyti jo netekimą minimaliame lygyje.
- Plona sienelė leidžia skysčiams tekėti greičiau.

Safe, Fast and Easy to Use for laparoscopic operations with three different models and large dimension alternatives

Endobags can be closed off more than one in abdomen. They are produced two different design as structure of asymmetric mouth and circular mouth. Endobags are manufactured from polyuretan that stretches 80 and 100 micron.

- ✓ **Extra wide and asymmetric mouth structure facilitates insertion of specimen**
Intuitional design facilitates the extraction of specimen
- ✓ **Extraordinary durability and closure**
Maximize the specimen's safety
Minimize the risk of contamination
Provides complete isolation for cancerous tissues
- ✓ **Antibacterial, Non-toxic and Non-allergic**
Provides safe use for all patient groups
- ✓ **Flexible and Transparent**
Visible specimen

tiemann catheter 43 P.D.

sterile

features:

- made of soft and flexible PVC, resistant to bending and twisting
- atraumatic, slightly rounded special tip facilitating insertion of the catheter
- tip with two side holes with soft rounded edges
- cone-shaped curved tip, bent at an angle of 45°
- transparent drain enabling visual inspection
- colour-coded connectors for size recognition, numerical size identification on the packaging
- single-use
- DEHP-free
- EO sterilized
- individual packaging: paper-foil

indication:

- catheterization of the urinary bladder in the case of a narrowed urethra

urine bag hanger

non-sterile

features:

- made of strong and durable plastic
- special clamp prevents tube bending
- suitable for round and square bed frames
- DEHP-free

indication:

- hanging standard urine collection bags

ref.	packaging unit	bulk packaging
WNM01	50 pcs	4 x 50 pcs

urine bag

sterile

features:

- latex-free bag
- capacity 2000 ml
- made of 0.22 mm thick, latex-free PVC (double wall)
- double sealed PVC to prevent spilling of fluids
- effective inlet valve
- tight T-valve, can be easily operated with one hand
- connecting drain with universal tip, standard length 90 cm (other lengths available: 110, 130, 150 cm)
- drain made of material preventing its bending or twisting and allowing easy flow of urine
- precise, easy-to-read scale (every 100 ml)
- strengthened holes for hanging, matching standard hangers
- white back wall making urine easy to notice
- single-use
- EO sterilized
- individual packaging: foil

indication:

- 24-hour collection of urine and other body fluids

Tiemann Kateteriai

- Pagaminti iš minkšto lankstaus PVC, atsparaus lankstymui ir sukimui
- Atraumatinis, šiek tiek užapvalintas specialus galiukas leidžia įvesti kateterį
- Galiukas su dvejomis šoninėmis angomis švelniais užapvalintais kraštais
- Kūgio formos užlenktas galiukas, lenktas 45° kampu
- Permatomas – suteikia galimybę vizualiniam patikrinimui
- Spalva koduoti antgaliai – dydžio atpažinimui, dydžių identifikacija skaičiais ant pakuotės
- Vienkartinio naudojimo
- Be DEHP
- EO sterilizuota
- Individuali pakuotė

Indikacijos:

- Šlapimo pūslės kateterizavimui susiaurėjusios šlaplės atveju

Trusted, high performance design. Proven TPU material. Firm during placement for easier stent passage, then softenes at body temperature for increased patient comfort. Used to provide temporary drainage from the ureteropelvic junction to the bladder. Supplied sterile in peel-open packages. Intended for single use. **Caution:** These stents are not intended as permanent indwelling devices. Periodic evaluation via cystoscopic or radio-graphic means is suggested. Must not remain indwelling for longer than 3 months.

Güvenilir, yüksek performans dizayn ile TPU konstrüksiyonu uygulamada kolaylık ve malzemenin vücut içinde yumuşamasına olanak tanımaktadır. UPJ ile mesane arasında geçici drenaj sağlamak amacı ile kullanılmaktadır. Steril paketlerde sunulmaktadır. Tek kullanımlık olarak dizayn ve imal edilmiştir.

Dikkat: Bu stentler kalıcı tıbbi cihaz değildir ve vücutta kalıcı kullanıma uygun değildir. Sistoskop veya radio-grafik kontroller önerilmektedir. Yerleştirilmiş olarak yerinde 3 aydan fazla kalmamalıdır.

HIGH PRESSURE SYRINGE

63 pd- Accutron MR injektoriaus vienkartinų švirkštų rinkinys

P/N: 400305

Compatible with Medtron Accutron MRI Injector

Suderinama su Medron Accutron MRI injektoriumi

Contents: 1-65ml Syringe

1vnt - 65ml švirkštas

1-200ml Syringe

1vnt- 200ml švirkštas

1-MRI Connecting Tube

1vnt- MRI prijungimo vamzdelis

1-Long Spike

ilgas smaigas

1-Short Spike

trumpas smaigas

Packing: 20PCS/CASE

Pressure: 350PSI

Slėgis: 350PSI

antmed
Partner For Life

- Bar-bell shaped pyrolytic carbon coated ceramic with exceptionally biocompatibility with clear imaging characteristics
- Unique shapes designed to prevent migration **negalintis migruotis**
- No allergy response or hypersensitivity reported **nealergizuojantis**
- Designed for safe, reliable, and precise placement during core biopsies
- Permanent and clear visibility with mammography, ultrasound and MRI **naudojamas mamografijoje, su UG ir MRI**
- No interference with MRI visualization, lower level of artifact than metal markers
- No interference with Tomosynthesis visualization
- Available in three distinct size configurations
- Available for vacuum assisted and core biopsy needle devices

WHEN TO USE

- Marking after removal of tumor
- Marking microcalcification area after breast vacuum assisted biopsy (VAB)
- Marking of suspicious breast lesions after critical core biopsy
- Orientation for planning radiation therapy

PAJUNK®

ChibaSono & Chiba
Fine Needle Biopsy Products

69 pd- Transabdominalinēs adatos amniocentezēms

MADE IN GERMANY

ChibaSono

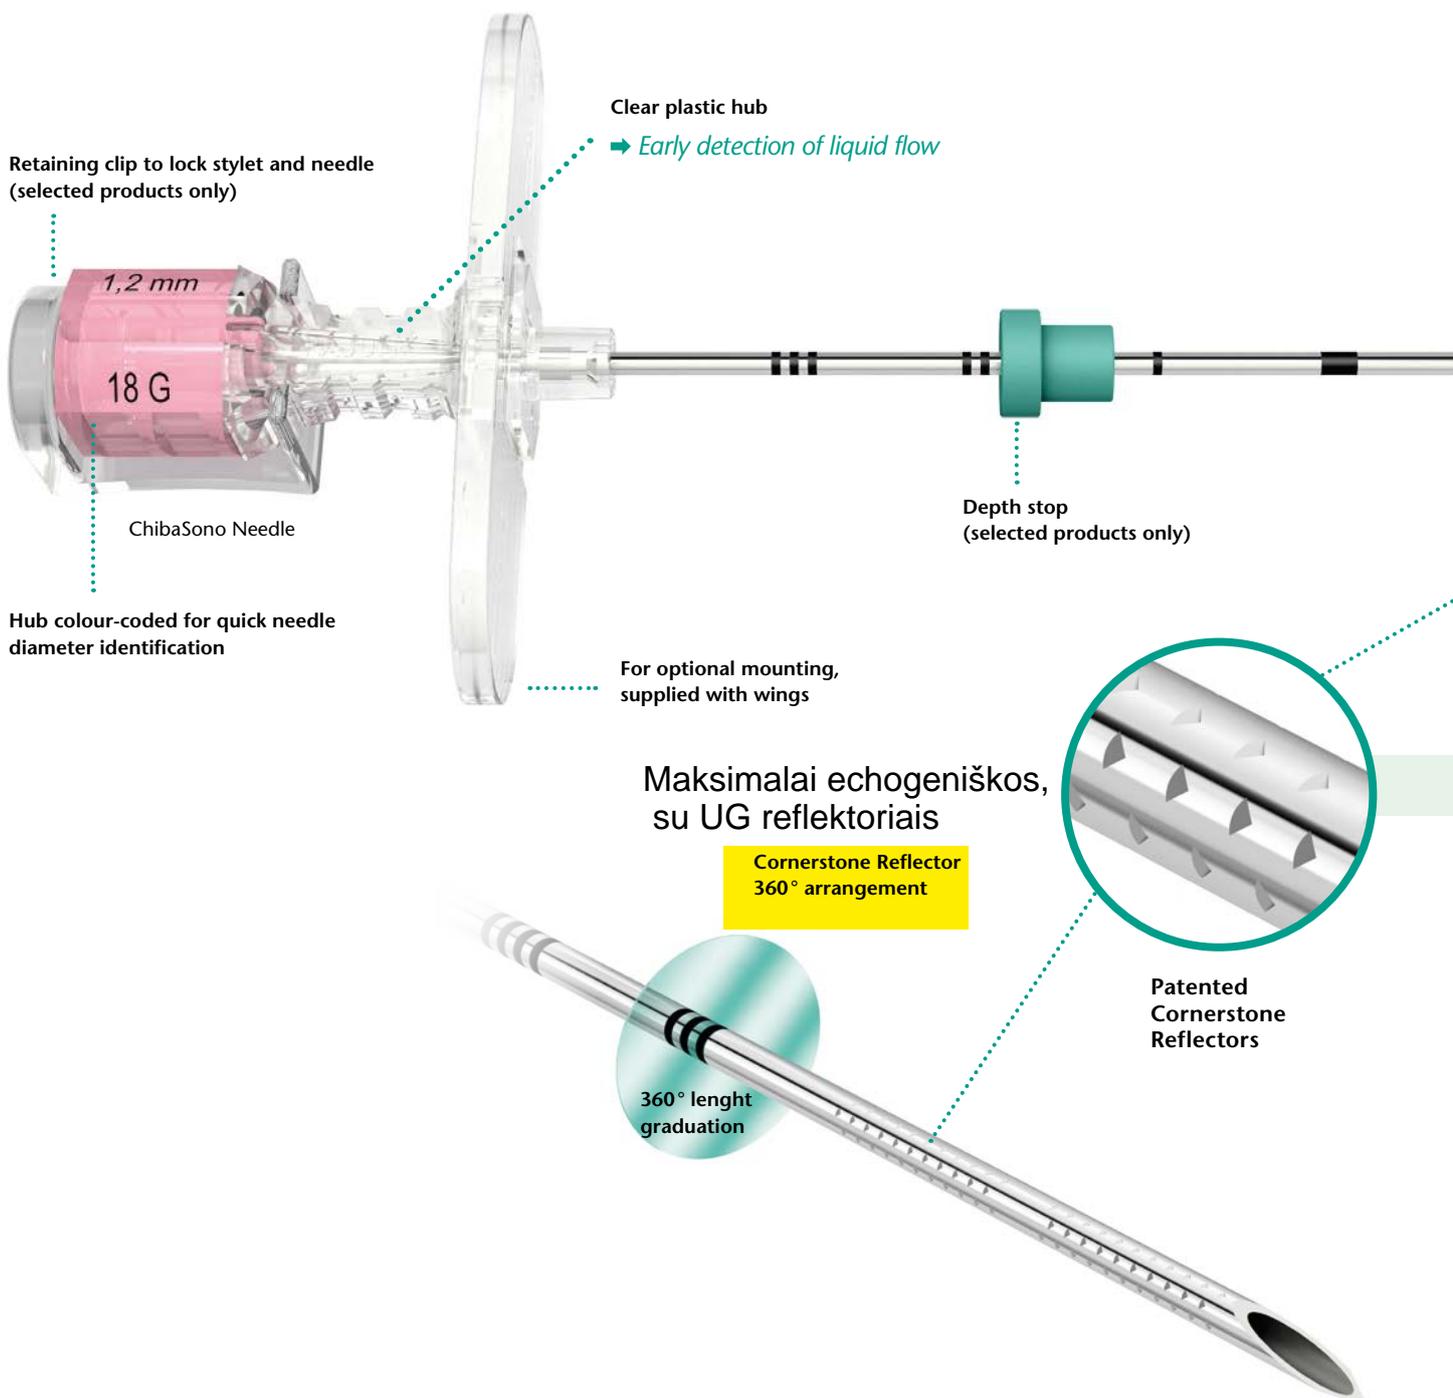

The echogenic biopsy needle

Echogeniška adata

Ultrasound guided biopsies have been increasing in the recent years. Together with Dr. Chris Mitchell, Pajunk has developed the ChibaSono, a new generation of needles that allow for a precise localisation under ultrasound. Needle and tip design allow the user to focus on the procedure and patient by making the tip visualisation under ultrasound faster, easier and safer.

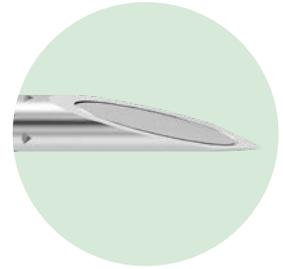

Approved for
prenatal diagnostics

ChibaSono with beveled tip

Stylet ground exactly flush

- ➔ Increased needle stability
- ➔ Avoids tissue carry-over into the puncture area

ChibaSono with US tip

Special needle cut and round blunt stylet, set back from tip

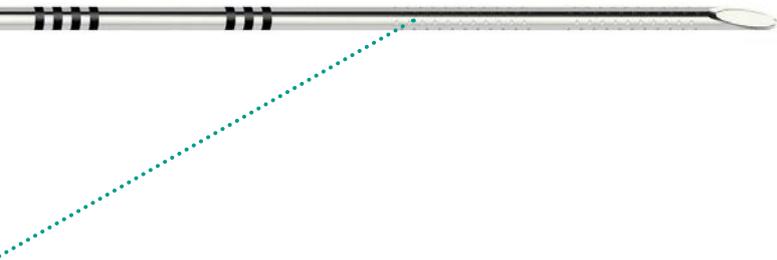

- ➔ Double reflex for improved needle tip visibility under ultrasound

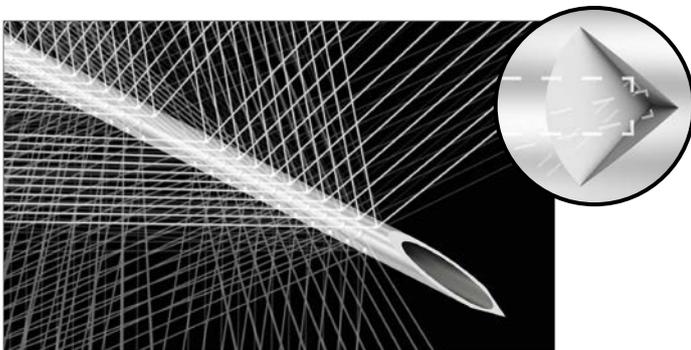

The essentials:

- ➔ Optimum sonographic visibility
- ➔ High precision needle tip
- ➔ Excellent gliding properties
- ➔ Depth control ensures patient and user safety

Depth markings
(selected products only)

OptiView = Optimum echogenicity from needle shaft to tip

Due to their geometry, arrangement and placement, the three-dimensional Cornerstone impressions ensure outstanding sonographic visibility.¹

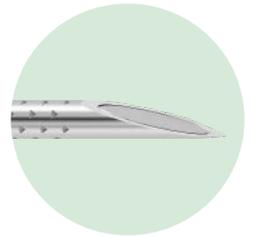

- ➔ The ultrasonic waves reflect without obstruction and are easier to identify irrespective of insertion angle²
- ➔ Outstanding needle shaft and tip visibility¹
- ➔ 360° clear identification over a total length of 20 mm^{1,2}
- ➔ High echogenicity at steep insertion angle³

¹ Edgcombe, Hocking, Sonographic identification of needle tip ..., 2010; 35(2): 207–211

² Hebard, Hocking, Echogenic technology can improve needle visibility ..., 2011; 36(2): 185–189

³ Uppal, Sondekoppam, Ganapathy, Effect of beam steering on ..., 2014; 61(10): 909–915

SWAB, SUCTION SWAB & TOOTBRUSH FOR ORAL CARE

ORAL CARE PROGRAM: Coremec disposable accessories for a appropriate hygiene procedure for mouth cavity.

Coremec has a complete line of swabs which will facilitate a proper appliance of oral hygiene and is focused on reducing hospital acquired infections for patients. The swabs and Brushes for oral hygiene "oral care" are packaged individually and are available in neutral version or treated with a refreshing mint substance. All items have a long plastic handle in order to prevent the possibility of contamination by contact. The foam tip has a curved shape suitable to easily remove the residue adhering to the teeth, helping to prevent dental plaque formation and the risk of VAP (ventilator associated pneumonia). Our Coremec Sponge Swabs are also available with the suction channels with a valve for regulating flow.

Ingredients treated sponge:
Agua, sodium lauryl sulfate, mint flavour, ethyl alcohol, sodium saccharine.
CEE 93/42 - 2007/47

LATEX FREE

Used for stone manipulation and removal in the urinary tract. The nitinol memory wire allows the basket to retain its shape following extreme torsion. The unique tiptless design aids in calyceal stone capture by allowing the basket to open at the base of the calyx or in the ureter and encircle the stone. The tiptless
