Thycotic Partners with LogRhythm to Offer Continued SIEM Support for Customers

Written by **Thycotic Team**
April 1st, 2014

In our ever expanding ecosystem of technology integration alliances, Thycotic has added another leader in SIEM technology to our list of out-of-the-box integrations. Now, Secret Server event logs integrate with LogRhythm's Security Intelligence Engine to improve network visibility for users.

LogRhythm's Security Intelligence Platform is known for combining enterprise-class SIEM, log management, file integrity monitoring and machine analytics to provide broad and deep visibility across an organization's entire IT environment. Using Syslog format, Secret Server can ship important syslog data into LogRhythm to compare events and ensure a more successful audit for your organization. By pairing Secret Server with LogRhythm, administrators can better monitor successful and failed user logins to privileged accounts, secret expirations and unsanctioned changes to administrator privileges.

Out of the box, Secret Server comes standard with 44 different events tracking more than 20 unique data fields, as well as the ability to create custom events based on your organization's security policy.

Table 1 - Event Name	Event Id
System Log	500
USER - CREATE	1
USER - DISABLE	2
USER - ENABLE	3
USER – LOCKOUT	4
USER - ADDEDTOGROUP	5
USER - REMOVEDFROMGROUP	6
FOLDER - CREATE	7
FOLDER - DELETE	8
ROLE - CREATE	9
ROLE - ASSIGNUSERORGROUP	10
ROLE - UNASSIGNUSERORGROUP	11
ROLEPERMISSION - ADDEDTOROLE	12

A few examples of SIEM events that come standard with Secret Server.

Implementing an enterprise-class privileged account management tool such as Secret Server with a SIEM solution not only helps organizations reach password compliance and mitigate risk, but also removes the complexities associated with the management and monitoring of privileged account credentials across a network.

For more information on how to successfully integrate SIEM solutions with Secret Server, read our **Value of SIEM** blog post and integration guide here.
