

Containers and bins for bio waste

Organic bio waste originates from plant or animal sources and is predominately stored in bio waste containers. During the process of transformation into compost the existing juices evaporate, which lead to lower weight and volume of the organic waste.

Volume: 660 lt, 770 lt,
1100 lt (flat and round lid)

Volume (lt): 120 lt, 140 lt, 240 lt

Bin for bio waste

Volume: 120lt, 140lt, 240lt
Material: HDPE
Color: brown

Container for bio waste

Volume: 660lt, 770lt, 1100lt
Material: HDPE
Color: brown

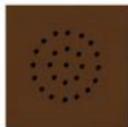

OPTIONS:

Lateral holes

ENABLE AIR CIRCULATION FOR EASIER DRYING AND REDUCTION OF UNPLEASANT ODOURS.

- * Optimal air circulation from the bottom to the top of the bin
- * Maintain an adequate oxygen level
- * Reduce gases, and thus the bad odours
- * Creates a favourable environment for the composting process
- * Options: lid distance rubber cushion for additional aeration

Foldable grid for bin

MADE OF PLASTIC, WITHOUT METAL PARTS, ATTACHED TO THE BODY WITH 2 PLASTIC HINGES

It separates the bio waste in 2 sections- the fluids drop down, while the dry content is kept above.

THE GRID IS HINGED ON AN AXLE IN ITS REAR PART, SO THAT IT CAN BE LIFTED INTO A VERTICAL POSITION THUS:
Facilitating the collection process
Allowing washing of the bin bottom.
