

## Goblets and Visotubes

The **goblet** is a transparent plastic container of Ø 65 mm designed to fit into the metal cannisters in standard cryo storage tanks.

The round colored **visotubes** are designed to sit inside the goblets and produced in six different colors and 5 different diameters: 7,1 - 9,2 - 10 - 12 - 13 mm .. (see page 43).

The **goblet divider** separates the goblet into 4 equal compartments that can be filled with visotubes of the diameter and color that fits into your inventory system.

The size of visotube to be used should be determined by the number of straws you would like to store - a thin visotube if few straws, and a wide one if many straws.

**ID rods** and a 7,1 mm visotube of same colors or different color visotubes in each compartment are simple ways of identifying the four compartments. The ID rods are also used for identifying the individual visotube.

The **ID strip** is a very convenient device for identification of the individual visotube. Fits into 9,2-13 mm visotubes.

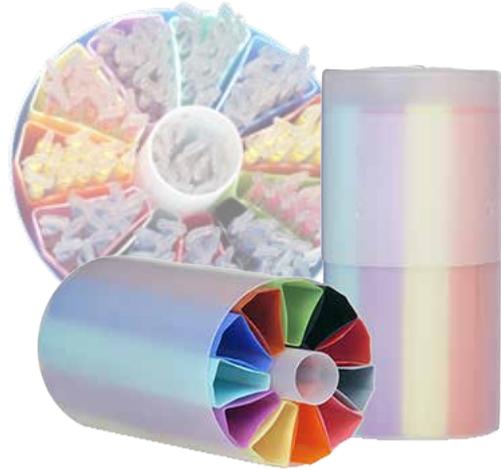

Item Specification	 Polygonal Visotube	 Hexagonal Visotube	 Round Visotube Ø 7,1 mm	 Round Visotube Ø 9,2 mm	 Round Visotube Ø 10 mm	 Round Visotube Ø 12 mm	 Round Visotube Ø 13 mm
