

## Falcon™ Standard Tissue Culture Dishes

### Description

- Flat, optically clear polystyrene surfaces for distortion-free microscopic visualization of cells
- Uniform surface chemistry created by vacuum-gas plasma treatment promotes cell attachment
- Improved handling of small dishes with the unique Easy-Grip design
- Nonpyrogenic
- Sterilized by gamma irradiation
- Packaged in peel-open, medical-style bags
- Crystal-grade virgin polystyrene
- Standard Tissue Culture (TC), Corning™ Primaria™ surface treatment and non-TC-treated polystyrene available

Designed for cell culture

### Specifications

|                         |                         |
|-------------------------|-------------------------|
| Color                   | Clear                   |
| Height (Metric)         | 20 mm                   |
| Culture Area            | 58.1 cm <sup>2</sup>    |
| Sterility               | Sterile                 |
| Surface Treatment       | Cell Culture            |
| Capacity (Metric)       | 17.5 mL (Well)          |
| No. per Pack            | 20/Pk.                  |
| Bottom Shape            | Flat                    |
| Shape                   | Round                   |
| Diameter (Metric)       | 100 mm                  |
| Material                | Polystyrene             |
| Type                    | Cell Culture Petri Dish |
| No. per Case            | 200/Cs.                 |
| Volume (Metric) Working | 16 to 17.5 mL           |
