

Straight Connector

Meets all connection requirements of the extracorporeal circulation system

Unique design and precision moulding techniques allow a smooth transition at tubing and connector junctions reducing blood turbulence

Produced from crystal clear polycarbonate allowing maximum visibility during de-airing procedures

20 Pirkimo dalis- Bronchų vamzdelis su kairio broncho atsiurbimo galimybe

◆ Endobronchial Tube

● Double-Lumen Endobronchial Tube

- Made of pvc in medical grade
- Available with left-sided and right-sided types
- The cuffs, **two lumens** and pilot balloons are imprinted with tracheal (clear) or bronchial (blue) for easy identification
- Smooth inner lumens allow easy passage of bronchoscopes
- Pre-loaded with stylet to help tube maintain shape for easier intubation
- Packed with switch **connector** and two low friction suction catheters **su adapteriu**

Anesthesia Products

wellead	Well Lead Medical Co., Ltd				
	Product General Description Tracheobronchial Tubes			Prepared by	Chen Xiao Ling
				Checked by	Huang Kai Gen
				Approved by	Guo Cui Hong
Doc. No	WL-E-20-02C	Effective Date	2015.12.10	Page No	Page 1 of 4

1. Brief introduction

An Tracheobronchial Tube is used in thoracic surgery or for anesthesia during pulmonary surgery, it is also used when selective collapse or ventilation of the pulmonary field can enhance surgical exposure and used for critically ill patients who have uni-lateral lung disease from pulmonary contusion. The Tracheobronchial Tube, a device with double-lumen tube, separate the left and right lungs for individual ventilation. The tube is usually inserted into the airways through the mouth of the patient. The air outlet of one of the channels is here placed in one of the bronchi, while the air outlet of the other channel, which is shorter, is then situated in the trachea. The windpipe is then closed by inflating a balloon which is arranged around the respiratory tube. The bronchus in which the air outlet of the longer channel is situated is likewise closed by inflating a balloon arranged therearound.

The Tracheobronchial Tube is made from PVC in medical grade, consists of main tube, tracheal connected tube, bronchial connected tube, tracheal cuff, bronchial cuff, valve, bronchial balloon, tracheal balloon, bronchial inflating line, tracheal inflating line, connector, four tube connector, subordinate connector, endoscopic connector, endoscopic cover, connected tube, three tube connector, super-slip stylet etc. The tracheobronchial tube has the following features:

- 100% latex free
- Available with two types product including left and right for thoracic surgery
- Atraumatic soft rounded beveled tip
- Softer rounded Murphy eye is less invasive
- Accurate depth marks
- Standard connector
- Radio opaque line provided
- With super-slip stylet make operate easily
- Sterile by EO, single use **sterilus, vienkartinis**

DISPOSABLE ECG ELECTRODE

Vienkartiniai

First US Full automatic processing factory in China since 2004, with 100,000 class clean room.

First manufacturer approved by US FDA in China, and CE, ISO9001, ISO 13485, MDSAP

Comfortable and Convenient, no residual and non-irritable

Excellent adhesive from special gel formula **Lipnus**

Different sizes and materials have been studied to meet the different requirements.

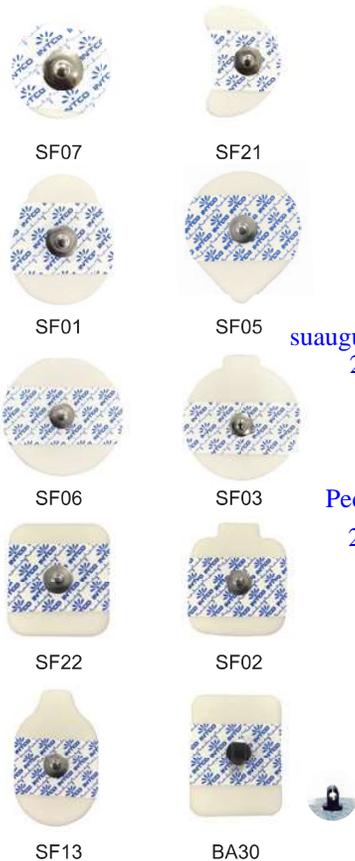

mikroporinis plastikas

Foam Stainless Steel Snap

Medical grade material is impervious to fluids, high tack medical grade adhesive is ideal for EMS and long term monitoring

Recommended usage

ICU/CCU, Surgery, Emergency, Anesthesiology
