Patient Weighing and VariZone Movement Detection Controls

Weigh - calculate and display patient weight.

Auto Compensation - allows items to be added or removed without affecting indicated patient weight.
Zero - reset weighing system.

Select Weight Display - rounds the patient weight to nearest 100 g or 500 g.

In bed - activate/deactivate patient movement detection and increase the sensitivity of the system.

Patient movement detection threshold display - an indicator shows the current system status and the selected sensitivity of patient movement detection.

Egress - activate/deactivate patient movement detection and decrease the sensitivity of the system.
