WHY CHLORHEXIDINE ?

Chlorhexidine is characterized by a wide antiseptic effect, while ensuring long-term action. It has bactericidal and bacteriostatic properties. It has a strong bactericidal action against Gram-positive, Gram-negative and fungi. Antimicrobial activity (bacteriostatic and bactericidal) consists in damaging the bacterial cell membrane which leads to an increase in its permeability. It is perfectly associated with the structure of the bacterial plaque. The product stays in the mouth for a long time, supporting the antibacterial effect.

Proper oral hygiene with antiseptics helps to reduce the risk of VAP. Sinmed now offers a portfolio of oral care solutions, designed to provide comprehensive oral care. All products have been designed to allow a full and effective oral care.
