Blades

Artroskopiniai skiveriai ortopedai 1
Dyonics skiveriai

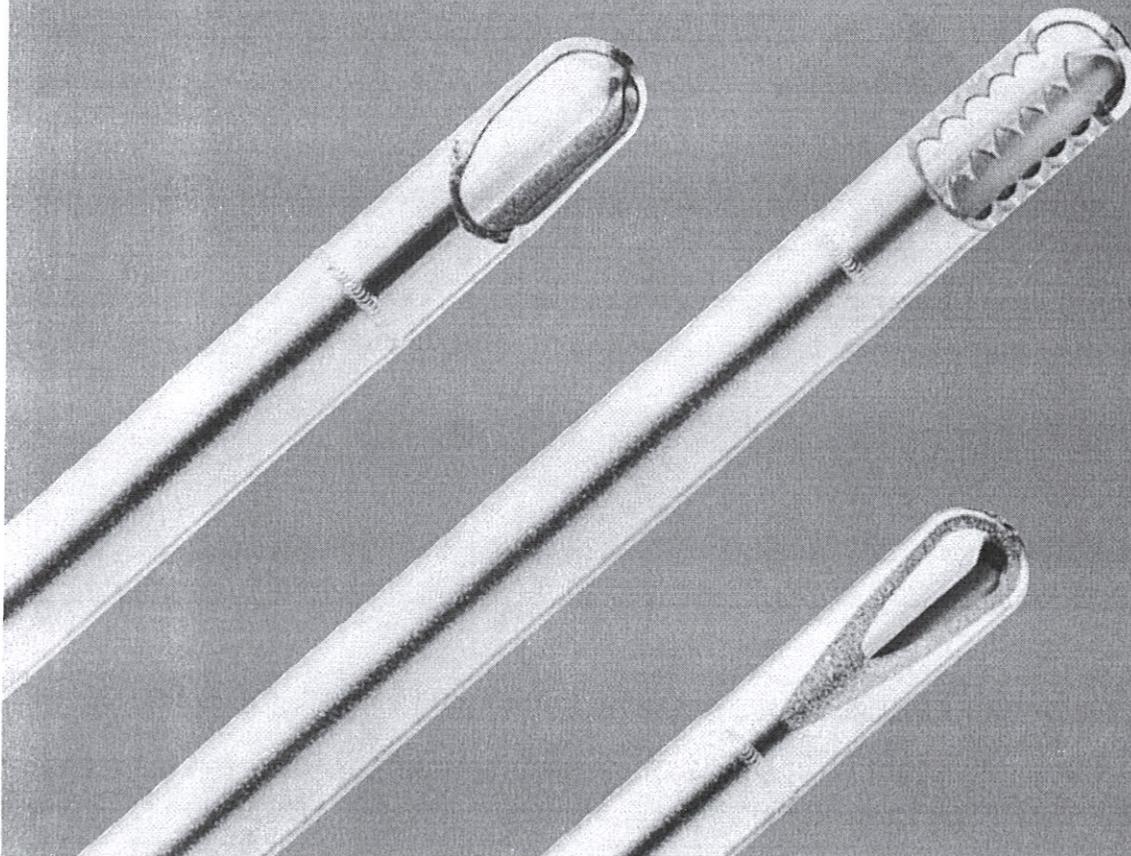

Unique options for unique situations

PLATINUM blades deliver faster resection, less clogging and low risk of metal debris.^{1,2}

For knee and shoulder*

Procedure	Objective
Meniscectomy	Remove torn tissue; stabilize meniscal rim
Synovectomy	Full or partial excision of synovial membrane
ACL	Remove ACL stump; clear field of tissue
Subacromial Decompression	Stop acromial impingement; clear obstructing bursa; debride frayed rotator cuff
Anterior Cruciate Ligament Reconstruction	Remove ACL stump; prepare notch graft; clear field of tissue

With a blunt tapered tip and a uniquely designed cutting window, the DYONICS® PLATINUM FLYER® blade takes aim at challenging the limits of specialty blades. A concave window shape was selected to maximize resection rates and limit clogging¹ in a shaver blade design that can easily access tight joint spaces² while maintaining the ability to address various soft tissue resection needs during an arthroscopic procedure². Engineered to incorporate DYONICS PLATINUM technologies, the PLATINUM FLYER blade is also durable^{3,4}, expanding Smith+Nephew's All Tears, All Repairs product portfolio to save the meniscus.

- Unique window designed to maximize resection rate and limit clogging¹
- Minimizes potential for damage to surrounding tissues during insertion and removal¹
- Easily accesses tight joint spaces²
- Surgeons have identified the PLATINUM FLYER blade to meet various arthroscopic soft tissue resection needs³

Concave cut design increases window area up to 57% vs straight cut design⁵

*Severo antpali.
dentas.*

78%
PLATINUM FLYER is shown to generate 78% less metal debris than Arthrex® 4.0mm Torpedo during soft tissue resection⁶

Take a bite out
of inefficiency

DYONICS PLATINUM Technology

DYONICS® PLATINUM Technology

Our most aggressive, efficient blade yet

The INCISOR® Plus PLATINUM Blade has a precision-sharpened, tooth-to-tooth design, allowing for our most efficient resection rate yet. In laboratory tests, it outperformed leading competitive blades in resection rate and clogging:¹

4.5 mm Blade Test Results:¹

- 46% more efficient resecting soft tissue than the 4.0 mm Competitive Blade B.
- 22% more efficient resecting soft tissue than the 4.2 mm Competitive Blade A.
- 34% more efficient resecting soft tissue than the INCISOR Plus ELITE® 4.5 mm Blade.
- Reduces clogging and shedding: during soft-tissue resection, the INCISOR Plus PLATINUM 4.5 mm Blade had significantly fewer clogs and less shedding than Competitive Blade A.
- Retains sharpness throughout the intended procedure.

5.5 mm Blade Test Results:¹

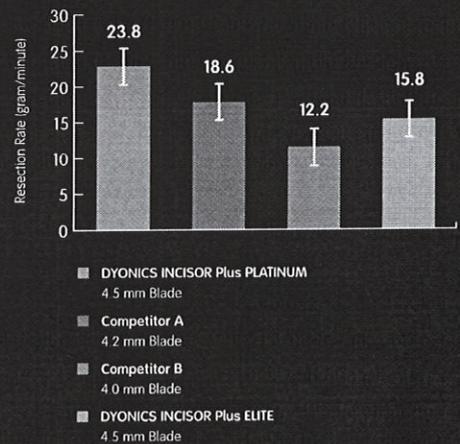

- 47% more efficient resecting soft tissue than the 5.5 mm Competitive Blade B.
- 23% more efficient resecting soft tissue than the 5.5 mm Competitive Blade A.
- Reduces clogging: during soft-tissue resection, the INCISOR Plus PLATINUM 5.5 mm Blade had significantly fewer clogs than Competitive Blade A.
- Retains sharpness throughout the intended procedure.

¹ DHF 018, 15001110, 15001313

² Evaluation Reports 15001153, 15001154, N=41

In a survey, 80% of surgeons said they liked using PLATINUM Blades better than their current device and 90% said they would use again.²

Single-use Blades
DYONICS® BONECUTTER® Blades

Seiverio antpali's rinkštyji
Aedinių ir kaulo rezektoriai
tuo pačiu metu.

DYONICS BONECUTTER Blades
Packaged 6 per box, sterile

BONECUTTER Blades resect both soft tissue and bone with a single blade, eliminating the need to switch from a straight blade to a burr. Proprietary SURILLIUM® coating helps maintain blade sharpness and durability throughout a procedure where tissue and bone resection are desired, such as subacromial decompression and ACL site preparation. Standard BONECUTTER Blades operate at speeds up to 8,000 RPM.

	Reference #	Description	Latch Color
