Scan with full borders (out to the very edge) using this cassette for your Basic Film Carrier 120 MK2 or Pro Film Carrier 120 MK2. Finally, scan the FULL borders of your 120 film to tell the FULL story of your photographs. This has been years in the making, and it's an industry first for this capability with this technology.

Scanning the full border of your medium format film is something many have wanted to do for some time, but it's difficult to do while holding your film flat and while avoiding costly drum scans or finicky flatbed scanning solutions. Now we've custom designed an all-new film scanning cassette, showing 100% of your 120/220 film image area + border, including film stock information and frame number.

We use an in-house finished micro-etched optical scanning acrylic to ensure film flatness, and a double S curve design that further aligns and flattens your film for professional results, every time.

This is a first for modern camera scanning technology at an accessible price point, and we're thrilled to finally offer this critical accessory.   Designed for scnaning 6x4.5, 6x6, 6x7, and 6x9 formats all with included masks.
