

# elastopor STERIL D

## dressing with absorbent pad, with incision and O-hole, sterile

### features:

- made of hydrophobic non-woven material
- incision and O-hole enabling application around a fixed drain
- covered with hypoallergenic acrylic glue
- micropores in the non-woven material structure provide an adequate rate of moisture vapour permeability so correct gas exchange between the dressing and skin is guaranteed
- centrally situated absorbent pad coated with polyethylene mesh absorbs small amounts of exudates, protects against external factors' influence and does not stick to the wound as well as facilitates removal of the dressing
- elastic - comfortable for the patient, adjusts to the body shape and guarantees freedom of movement
- rounded edges prevent accidental removal of the dressing
- silicone paper backing facilitates precise, painless and efficient application
- hypoallergenic
- sterile

### indication:

- protection of the site of drain or catheter application
- dressing wounds with small and medium exudate level

## cannula dressing, sterile

### features:

- made of hydrophobic non-woven material
- adhesive
- covered with hypoallergenic acrylic glue
- centrally situated absorbent pad protects the non-woven material from sticking to the injection site
- non-woven lining should be placed under cannula's wings, which prevents it from causing damage to the skin
- rounded edges prevent accidental removal of the dressing
- micropores in the non-woven material structure provide an adequate rate of moisture vapour permeability so correct gas exchange between the dressing and skin is guaranteed
- elastic - adjusts to the body shape and guarantees freedom of movement
- silicone paper backing facilitates precise, painless and efficient application
- hypoallergenic
- sterile

### indication:

- stabilization, protection and fixation of intravenous cannulas

## foil dressing, sterile

### features:

- made of polyurethane film
- adhesive
- covered with hypoallergenic acrylic glue
- transparent - allows observation of the dressed place without removing the dressing
- vapour permeability guarantees correct gas exchange between the foil and skin and prevents it from excessive accumulation of moisture and maceration
- barrier against microorganisms and bacteria minimizing infection risk
- very thin and elastic - adjusts to the body shape and guarantees freedom of movement
- may remain on the skin up to 7 days; optimum holding time of the dressing is from 3 to 4 days
- the application system - "frame" or "three-stage" type - facilitates precise and painless application of the dressing
- available in various sizes and options:
  - with central absorbent pad
  - with incision which allows adjusting of the dressing to cannula
  - without incision or absorbent pad
- waterproof
- hypoallergenic
- sterile
