

XAGA 500

Joint Closure System for Unpressurized Copper Telephone Networks

- Heat-shrinkable composite joint closure system for environmental and mechanical protection of joints in the unpressurised telephone network: aerial, buried or ducted, non filled or jelly filled cables with polyethylene, lead, steel or aluminium sheaths
- Composite structure of the reinforced Rayfort sleeve offers an excellent resistance to mechanical abuse during and after the installation
- Integrated moisture barrier completely reconstitutes the cable sheath over the total splice area
- Hotmelt adhesive forms a watertight seal to the cable sheath
- Supporting liner insulates, shapes and compacts the splice bundle
- Up to 3 cables at each end can be accommodated using three finger clips with hotmelt adhesive
- Installation indication: heat sensitive paint and adhesive flow, white line
- Extended size range can accommodate splices up to 800 pairs
- Unlimited shelf life

* Note for branched joints

1 The standard XAGA 500 kit is designed for max. 2 cables branched at one end only. Branched joints with more cables require the use of one additional branch-off kit (BOKT-5S or 5M) per added cable.

2 For joints with 2 or more cables in one end the overall diameter must be determined.

Add 6 mm for every small clip or 8 mm for every medium clip. In each case the total diameter may not exceed the maximum joint diameter. See the diagram to the right.

Use size XAGA-500-75/15-xxx depending on joint length.

* Note for filled joints (optional)

A special filling compound RSS and filling kit components are available.
