Pack tapered Tornado[®] coils in selective or short vessels.

Tornado[®] EMBOLIZATION COIL

Ideal for tapered vessels

The Tornado is the choice for smaller vessels that taper down in width. The coil can also occlude short, straight vessels.

A large range of coil profiles

The Tornado has a large number of profiles that are designed for use in .018 and .035 inch coil systems.

Excellent packing coil

The soft platinum Tornado coil conforms to the vessel to create a tight, occluding mass.

Tornado®

EMBOLIZATION COIL

The platinum coil with synthetic fibers is used for the embolization of selective vessel supply to arteriovenous malformations and other vascular lesions. The tornado-shaped configuration maximizes coil exposure to a cross-section of the lumen for disruption of blood flow.

The soft platinum conforms to the vessel to create a tight occluding mass.

The coil is ideally suited for tapering vessel situations.

The coil is available in sizes that fit .018 and .035 inch catheters.

Tapering diameters range from 4-3 to 10-5 mm.

The coil exits the delivery catheter small end first.
