

**Expert Opinion on the Efficacy of Sekusept Pulver + Activator for Sekusept Pulver as Disinfectant for Medical Instruments**

Sekusept Pulver is a powder formula, releasing peracetic acid as active ingredient upon dissolution in water. The Activator for Sekusept Pulver is used in a prescribed manner to achieve a wide range of efficacy against different infectious agents. This combination of products was tested according to standards as defined by EN 14885 for disinfectants for medical instruments. The following test standards were applied, each with high organic soil load ("dirty conditions"):

<b>Test Standard</b>	<b>Test Type</b>	<b>Efficacy range covered</b>	<b>Test laboratory and report date</b>
EN 13727	suspension	bactericidal	HygCen, 13.03.2008
EN 14561	carrier	bactericidal	HygCen, 14.03.2008
EN 13624	suspension	yeastocidal	HygCen, 13.03.2008
EN 14562	carrier	yeastocidal	HygCen, 14.03.2008
EN 14348	suspension	tuberculocidal	HygCen, 01.04.2008
EN 14563	carrier	tuberculocidal	HygCen, 01.04.2008

Hence, the full range of phase 2 step 1 tests and phase 2 step 2 tests within the framework of European standardization, as given by EN 14885 has been covered for the above mentioned efficacy range.

The product was effective in all tests and can therefore be claimed bactericidal, yeastocidal and tuberculocidal for the disinfection of medical instruments with the following concentrations and contact times under dirty conditions:

2% Sekusept Pulver + 2% Activator for Sekusept Pulver	15 minutes
1.5% Sekusept Pulver + 1.5% Activator for Sekusept Pulver	30 minutes
1% Sekusept Pulver + 1% Activator for Sekusept Pulver	60 minutes
