HEALTHPORT® **POWER PLP**

VENOUS PORT

- Chamber specifically designed to be used for High-flow Injections of contrast media
- Large self-sealing septum facilitates location during skin palpation and reduces risks of puncture concentration
- Transparent and radiopaque elastomeric connector allows rapid, safe and reversible connection of the catheter
- Low profile plastic chamber, also suitable for patients with thick subcutaneous fat layer

Features

Port

Material:	Titanium + Polysulfone
Shape and dimensions:	circular - base diameter 27 mm
Height:	10.6 mm
Weight:	5.9 g
Internal volume:	0.36 ml

Septum

Material:	Silicone
Diameter available for puncture:	13 mm
Maximum number of punctures:	2000 with 22G Huber needle
	1000 with 19G Huber needle

Max Flow Rate: 5ml/s with Max pressure 300PSI, Max Viscosity 12cP

Catheter with rounded tip, marked with a dot every centimeter and a number every 5 centimeters.
