Our Credo

We believe our first responsibility is to the doctors, nurses and patients,
to mothers and fathers and all others who use our products and services.

In meeting their needs everything we do must be of high quality.

We must constantly strive to reduce our costs

in order to maintain reasonable prices.

Customers' orders must be serviced promptly and accurately.

Our suppliers and distributors must have an opportunity

to make a fair profit.

We are responsible to our employees,

the men and women who work with us throughout the world.

Everyone must be considered as an individual.

We must respect their dignity and recognize their merit.

They must have a sense of security in their jobs.

Compensation must be fair and adequate,

and working conditions clean, orderly and safe.

We must be mindful of ways to help our employees fulfill

their family responsibilities.

Employees must feel free to make suggestions and complaints.

There must be equal opportunity for employment, development

and advancement for those qualified.

We must provide competent management,

and their actions must be just and ethical.

We are responsible to the communities in which we live and work
and to the world community as well.

We must be good citizens — support good works and charities

and bear our fair share of taxes.

We must encourage civic improvements and better health and education.

We must maintain in good order

the property we are privileged to use,

protecting the environment and natural resources.

Our final responsibility is to our stockholders.

Business must make a sound profit.

We must experiment with new ideas.

Research must be carried on, innovative programs developed

and mistakes paid for.

New equipment must be purchased, new facilities provided

and new products launched.

Reserves must be created to provide for adverse times.

When we operate according to these principles,

the stockholders should realize a fair return.

Johnson & Johnson

Selection and use of surgical needles

Intelligent Geometry

A Unique Needle Range

ETHIGUARD Blunt Point Needles

Improving safety

Taper Point Needles

Gentle separation of fibrous tissue

BV Needles

Consistency pass after pass

VISI-BLACK Needles

Visibility is their strength

CC Needles

Easy penetration of calcified coronary tissues

HEMO-SEAL Needle Sutures

A fitting choice for vascular surgery

MULTICURVE Needles

For confined access procedures

TAPERCUT Needles

Easy penetration of dense tough tissue

PRIME Needles

Excellence in skin closure

Anatomy of a Needle

Needle Point Needles can taper to a point or have cutting edges.

Taper Ratio Longer points for improved penetration.

Needle Body

Needle flat

Flatted section for stability in the needle holder.

Ribs

In larger needles there is a ribbed section to provide a secure grip.

Square Body

Needles can also have a square body for increased strength.

Swage

A hole is drilled into the end of the wire and the material is attached into this hole. For premium needles the needles are laser drilled which provides a smooth transition between needle and material thus reducing tissue trauma.

Needle Shape

The choice of needle shape is frequently governed by the accessibility of the tissue to be sutured, and normally the more confined the operative site the greater the curvature required. The basic shapes involved are:

Round Bodied needles

Round Bodied needles are designed to separate tissue fibres rather than cut them. They are used either for soft tissue or in situations where easy splitting of tissue fibres is possible. After the passage of the needle, the tissue closes tightly round the suture material, thereby forming a leak-proof suture line which is particularly vital in Intestinal and Cardio-vascular surgery.

Round Bodied needles are manufactured with different wire diameters according to the tissue to be sutured. For softer tissue such as bowel finer wire diameters can be used. Whereas for muscle or fascia heavier wire diameters are required.

TAPERPOINT Needle

This point profile is engineered to provide easy penetration of intended tissues. Forceps flats are formed in an area half way between the point and the attachment, Positioning the needle holder in this area confers extra stability on the needle being held, aiding precise placement of the sutures. Taper Point needles are available in a range of wire diameters and the finer diameters can be used for softer tissue in gastrointestinal or vascular procedures whereas heavier diameters are required for tougher tissue such as muscle.

TAPERPOINT Plus

A modified point profile for most of our needles. In a modified profile, the tapered cross section immediately behind the tip has been flattened to an oval shape rather than a conventional round shape.

This continues for several millimeters before merging into the conventional round bodied cross section. This design was developed to help facilitate improved separation of tissue layers.

VISI - BLACK Needle

These black needles have been designed to give outstanding visibility against tissue and where blood is present in the operating field. The slim Taper Point design of the VISIBLACK Needle brings improved penetration properties and minimises tissue trauma.

ETHIGUARD Blunt Point Needle

The needles has been designed to minimise the risk of needle stick injury. The ETHIGUARD Needle point is sharp enough to penetrate fascia and muscle but not skin. Virtually eliminating accidental glove puncture, the ETHIGUARD Needle can also be used for suturing friable tissue such as the liver.

Blunt Point Needle

This needle has been designed for suturing extremely friable tissue such as the liver.

CC Needle

The unique point design of the CC Needle provides significantly improved penetration properties for the Cardiac / Vascular surgeon when suturing tough, calcified vessels. This is achieved with no increase in tissue trauma compared to the conventional round bodied needle. Squared body geometry, in addition to providing a stronger fine vascular needle, also means this needle is particularly secure in the needle holder.

TAPERCUT Needle

This needle combines the initial penetration of a cutting needle with the minimised trauma of a round bodied needle. The cutting tip is limited to the point of the needle, which then tapers out to merge smoothly into a round cross section.

Cutting Needles - for Fibrous Tissue

Cutting needles are required wherever fibrous or dense tissue needs to be sutured.

Reverse Cutting Needle

The body of this needle is triangular in cross section, having the apex cutting edge on the outside of the needle curvature. This improves the strength of the needle and particularly increases its resistance to bending.

TROCAR POINT Needle

Based on the traditional TROCAR POINT, this needle has a strong cutting head which then merges into a robust round body. The design of the cutting head ensures powerful penetration, even when deep in dense tissue.

Cutting Needles for Plastic and Cosmetic Surgery

PRIME and PRIME MULTIPASS needles

PRIME and PRIME MULTIPASS needles are manufactured with an exclusive needle tip design. The cross sectional geometry of the needle tip reduces the angles of the cutting edges which gives improved penetration and control.

A square body on the needle greatly increases needle strength and offers improved stability in the needle holder. PRIME needles are available with either a reverse cutting or a conventional cutting profile.

PRIME MULTIPASS needles offer PRIME geometry and advanced MULTIPASS needle coating technology.

SUPERIOR EASE OF PENETRATION

SUPERIOR RESISTANCE TO BENDING

Cutting Needles for Skin Closure

Conventional Cutting Needle

This needle has a triangular cross section with the apex of the triangle on the inside of the needle curvature. The effective cutting edges are restricted to the front section of the needle and merge into a triangulated body which continues for half the length of the needle.

Reverse Cutting Needle

The body of this needle is triangular in cross section, having the apex cutting edge on the outside of the needle curvature. This improves the strength of the needle and particularly increases its resistance to bending.

Ophthalmic Needles

These fine needles are manufactured using a unique process which ensures extremely sharp cutting edges. The range includes spatulated designs for suturing specific layers of the eye in Anterior Segment surgery in addition to round bodied, cutting and TAPERCUT designs for specific ophthalmic and oculoplastic procedures.

CS-ULTIMA Spatula Needle

This needle represents a dramatic change in ophthalmic needle design. Its concave spatula geometry requires considerably less force to penetrate corneal scleral tissue than existing needles. This results in much less disruption of the of the cornea and the real possibility of reduced post-operative suture related astigmatism.

ADVANCED MICRO-POINT Spatula Needle

Due to the ultra fine diameter of this needle, a new concept of design has been necessary. An extremely sharp cutting point has been merged into a square body to produce superb penetration characteristics. In addition, the square body greatly increases resistance to bending and gives much improved needle holder security, locking the needle at the correct angle for secure accurate suture placement.

MICRO-POINT Spatula Needle

This needle has a thin, flat profile which allows the needle to penetrate between the layers of scleral or corneal tissue.

SPATULATED Needle

Similar in cross section to MICRO-POINT Spatula needles, this is designed for scleral suturing which requires stronger needles and where the elimination of cut out or cut down by a third edge is essential.

MICRO-POINT Reverse Cutting Needle

The third cutting edge of this needle lies on the outside of its curvature, thereby eliminating the possibility of needle cut out during suture placement.

CONTROL RELEASE Needle Sutures

1. The needle is held securely in the needle holder. Suture is grasped securely just below needle, pulling strand taut.

2. The needle is released with a straight tug of the needleholder.

Use of Needle Holders

- 1 The needle holder should be carefully selected to match the size and strength of the needle to be used. The use of a needle holder larger than required can result in damage to the needle and in particular, distortion of the curvature.
- 2 The needle holder should be in good condition as worn jaws can result in needle rotation and instability in the needle holder. Nicks or defects in the needle holder jaws can also cause damage to the needle and loss of strength.
- 3 Needles should be grasped securely on the tip of the needle holder jaws.
- 4 Needles should only be held in the flattened area provided and should not be grasped on the attachment area or near to the needle point. Needles which are not flattened should be grasped for placement at a point approximately one third of the needle length from the butt. Excessive force should not be applied when gripping the needle, particularly with Tungsten Carbide jaw inserts, as this may damage the needle body and cause loss of strength or breakage.

Use of Surgical Needles

- 1 The force required to achieve passage of the needle through tissue should be applied in a direction following the curvature of the needle.
- 2 Care should be taken to match the size of the needle to the size of tissue bite required. The use of too small a needle for a given tissue bite can lead to bending.
- 3 Should the placement of the needle in tissue require to be readjusted, the needle should be removed and re-inserted. No attempt should be made to twist the needle in tissue.
- 4 The needles should normally be inserted separately into each side of the tissue to be approximated and should not be used to bridge a wound.

Plus Antibacterial Sutures

ETHICON developed VICRYL* Plus, MONOCRYL* Plus and PDS* Plus Antibacterial Sutures in order to address the problem of Surgical Site Infections (SSIs).

ETHICON Plus Sutures contain IRGACARE* MP (triclosan), an antibacterial technology that helps inhibit bacterial colonization on the surface of the suture ¹.

Since 66% of infections are confined to the incision, use Plus Sutures as part of your SSI protocol to help prevent them ².

SUTURES
Plus
Antibacterial
Suture

IRGACARE* MP - The Antibacterial Component

ETHICON Plus Sutures, with IRGACARE* MP, provide the same wound healing, wound strength and tissue response as traditional sutures ³.

IRGACARE* MP, the purest form of triclosan, has a favorable safety profile spanning over 30 years ⁴. The safety of triclosan as the antibacterial agent in Plus Sutures has been well evaluated and confirmed. Over 150 million Plus Sutures have been distributed.

Triclosan is broken down and metabolized in the body. Triclosan is excreted in a neutralized, inactive form via the kidneys, posing no threat to the patient or the environment ⁴.

VICRYL* Plus, MONOCRYL* Plus and PDS* Plus Sutures with IRGACARE* MP are effective against the pathogens most commonly associated with SSIs ⁵:

- *Staphylococcus aureus*
- *Staphylococcus epidermidis*
- Methicillin-resistant *Staphylococcus aureus* (MRSA)
- Methicillin-resistant *Staphylococcus epidermidis* (MRSE)

MONOCRYL* Plus and PDS* Plus Sutures are also effective against:

- *Escherichia coli*
- *Klebsiella pneumoniae*

*VICRYL Plus and another suture
in Staphylococcus aureus*

VICRYL* Rapide

(Polyglactin 910) Suture

ETHICON
PART OF THE *Johnson & Johnson* FAMILY OF COMPANIES

VICRYL* Rapide (Polyglactin 910)

SUTURE

Description:

Braided Coated	For easy handling and secure knot tying. For smooth passage through tissue and easy knot tie down.
Synthetic Absorbable	For minimal tissue reaction. By hydrolysis. Essentially complete in 42 days.

Tensile strength: Post implantation

	Approximate % original strength remaining
5 days	50%
10-14 days	0%

5 days	50%
10-14 days	0%

VICRYL* Rapide suture typically falls off 7-10 days post-operative or can be wiped off subsequently with gauze. Normally the removal of the suture is not required.

Color: Undyed or violet.

Range: 8-0 to 1 (USP). Supplied as needled sutures and ligatures.

Indications: VICRYL* Rapide is intended for use in soft tissue approximation where only short term wound support is required and where the rapid absorption of the suture would be beneficial. Typical areas of use include:

- Skin closure, cuticular or subcuticular
- Episiotomies
- Closure of oral mucosa
- Conjunctival sutures in ophthalmic surgery

Full details in the Instruction for Use included in every package.

MONOCRYL*

(Poliglecaprone 25) Suture

ETHICON
PART OF THE *Johnson & Johnson* FAMILY OF COMPANIES

MONOCRYL*

(Poliglecaprone 25) Monofilament

SUTURE

Description: Monofilament Synthetic Absorbable For smooth passage through tissue. For minimal tissue reaction. By hydrolysis. Essentially complete in 90 -120 days.

Tensile strength: Post implantation Approximate % original trength remaining

7 days	60% (violet) 50% (undyed)
14 days	30% (violet) 20% (undyed)
21 days	0% (undyed)
28 days	0% (violet)

Color: Violet or undyed.

Range: 6-0 to 1 (USP). Supplied as needled sutures and ligatures.

Indications: MONOCRYL* sutures are intended for use in general soft tissue approximation and/or ligation where an absorbable material is indicated. Typical areas of use include:

- Subcuticular sutures
- Small intestine anastomoses
- Urological anastomoses

Full details in the Instruction for Use included in every package.

MONOCRYL* Plus

(Poliglecaprone 25) Antibacterial Suture

ETHICON
PART OF THE *Johnson & Johnson* FAMILY OF COMPANIES

MONOCRYL* Plus

(Poliglecaprone 25) Antibacterial

SUTURE

Description: **Monofilament Synthetic Absorbable** For smooth passage through tissue. For minimal tissue reaction. By hydrolysis. Essentially complete in 90 -120 days.

Tensile strength: **Post implantation** **Approximate % original trength remaining**

7 days 60% (violet)
50% (undyed)

14 days 30% (violet)
20% (undyed)

21 days 0% (undyed)
28 days 0% (violet)

Color: Violet or undyed.

Range: 6-0 to 1 (USP). Supplied as needled sutures and ligatures.

Indications: MONOCRYL* Plus sutures are intended for use in general soft tissue approximation and/or ligation where absorbable material is indicated. Typical areas of use include:

- Subcuticular sutures
- Small intestine anastomoses
- Urological anastomoses

Protection against bacterial colonization

In vitro studies demonstrate, that MONOCRYL* Plus suture has a zone of inhibition that is effective against the pathogens that most frequently cause surgical site infection, including *Staphylococcus aureus*, methicillin resistant *Staphylococcus aureus* (MRSA), *Staphylococcus epidermidis*, methicillin resistant *Staphylococcus epidermidis* (MRSE), *E. coli* and *Klebsiella pneumoniae*.

Full details in the Instruction for Use included in every package.

VICRYL*

(Polyglactin 910) Suture

ETHICON
PART OF THE *Johnson & Johnson* FAMILY OF COMPANIES

VICRYL*

(Polyglactin 910) Braided and Monofilament

SUTURE

Description:	Braided	For easy handling and secure knot tying.
	Coated	For smooth passage through tissue and easy knot tie down.
	Synthetic	For minimal tissue reaction.
	Absorbable	By hydrolysis. Essentially complete in 56-70 days.

Tensile strength:	Post implantation	Approximate % original strength remaining
	14 days	75%
	21 days	50% (6-0 and larger)
		40% (7-0 and smaller)
	28 days	25% (6-0 and larger)

Color: Violet or undyed.

Range: 10-0 to 6 (USP). Supplied as needled sutures and ligatures. Sizes 10-0 and 9-0 are monofilament in structure.

Indications: VICRYL* sutures are intended for use in soft tissue approximation and/or ligation, including use in ophthalmic surgery, peripheral nerve adaptation and microsurgery for vessels less than 2 mm in diameter. Typical areas of use include:

- Fascia closure - due to the 28-day claim
- Subcutaneous fat
- Joint capsule
- Uterus

Full details in the Instruction for Use included in every package.

VICRYL* Plus

(Polyglactin 910) Antibacterial Suture

ETHICON
PART OF THE *Johnson & Johnson* FAMILY OF COMPANIES

VICRYL* Plus

(Polyglactin 910) Braided Antibacterial

SUTURE

Description:	Braided	For easy handling and secure knot tying.
	Coated	For smooth passage through tissue and easy knot tie down.
	Synthetic	For minimal tissue reaction.
	Absorbable	By hydrolysis. Essentially complete in 56-70 days.

Tensile strength:	Post implantation	Approximate % original strength remaining
	14 days	75%
	21 days	50%
	28 days	25%

Color: Violet or undyed.

Range: 5-0 to 2 (USP). Supplied as needled sutures and ligatures.

Indications: VICRYL* Plus sutures are intended for use in soft tissue approximation and/or ligation, including use in microsurgery for vessels less than 2 mm in diameter. The safety and effectiveness of VICRYL* Plus sutures in cardiovascular tissue, ophthalmic surgery and neurological tissue have not been established. Typical areas of use include:

- Fascia closure - due to the 28-day claim
- Subcutaneous fat
- Joint capsule
- Uterus

Protection against bacterial colonization

In vitro studies demonstrate, that VICRYL* Plus suture has a zone of inhibition that is effective against the pathogens that most frequently cause surgical site infection, including *Staphylococcus aureus*, methicillin resistant *Staphylococcus aureus* (MRSA), *Staphylococcus epidermidis* and methicillin resistant *Staphylococcus epidermidis* (MRSE).

Full details in the Instruction for Use included in every package.

PDS* II

(Polydioxanone) Suture

ETHICON
PART OF THE *Johnson & Johnson* FAMILY OF COMPANIES

PDS* II

(Polydioxanone) Monofilament

SUTURE

Description: **Monofilament** For smooth passage through tissue.
Synthetic For minimal tissue reaction.
Absorbable By hydrolysis. Essentially complete in 182-238 days.

Tensile strength: Post implantation **Approximate % original strength remaining**

14 days 80% (3-0 and larger)
 60% (4-0 and smaller)

28 days 70% (3-0 and larger)
 40% (4-0 and smaller)

42 days 60% (3-0 and larger)
 35% (4-0 and smaller)

Color: Violet or undyed.

Range: 7-0 to 2 (USP). Supplied as needed sutures and ligatures.

Indications: PDS* II sutures are intended for use in general soft tissue approximation, including use in pediatric cardiovascular tissue, in microsurgery and in ophthalmic surgery. PDS* II sutures are particularly useful where the combination of an absorbable suture and extended wound support is desirable. Typical areas of use include:

- Abdominal wall closure
- Intestinal anastomoses
- Ligament and tendon repair

Full details in the Instruction for Use included in every package.

PDS* Plus

(Polydioxanone) Antibacterial Monofilament

ETHICON

PART OF THE *Johnson & Johnson* FAMILY OF COMPANIES

PDS* PLUS

(Polydioxanone) Antibacterial Monofilament

SUTURE

Description: **Monofilament** For smooth passage through tissue.
 Synthetic For minimal tissue reaction.
 Absorbable By hydrolysis. Essentially complete
 in 182-238 days.

Tensile strength: **Post implantation** **Approximate % of original strength remaining**

14 days	80% (3-0 and larger)
	60% (4-0 and smaller)
28 days	70% (3-0 and larger)
	40% (4-0 and smaller)
42 days	60% (3-0 and larger)
	35% (4-0 and smaller)

Color: Violet or undyed

Range: 6-0 to 1 (USP). Supplied as needled sutures and ligatures.

Indications: PDS* Plus Antibacterial Sutures are intended for use in general soft tissue approximation, including in paediatric cardiovascular tissue, and in ophthalmic surgery (other than contact with cornea and sclera). PDS* Plus Antibacterial Sutures are particularly useful where the combination of absorbable suture and extended wound support is desirable. Typical areas of use include:

- Abdominal wall closure
- Intestinal anastomoses
- Ligament and tendon repair

Protection against bacterial colonization

In vitro studies demonstrate, that PDS* Plus Antibacterial Suture has a zone of inhibition that is effective against the pathogens that most frequently cause surgical site infection, including Staphylococcus aureus, methicillin resistant Staphylococcus aureus (MRSA), Staphylococcus epidermidis, methicillin resistant Staphylococcus epidermidis (MRSE), E. coli and Klebsiella pneumoniae.

Full details in the Instruction for Use included in every package.

PROLENE*

Monofilament Polypropylene

ETHICON
PART OF THE *Johnson & Johnson* FAMILY OF COMPANIES

PROLENE*

Monofilament Polypropylene

SUTURE

Description: **Monofilament** For smooth passage through tissue.
 Synthetic For minimal tissue reaction.
 Non-absorbable Provides permanent tensile strength retention in tissue.

Color: Blue or clear.

Range: 10-0 to 2 (USP). Supplied as needled sutures, armed with, for example, EVERPOINT* Tungsten-Rhenium needles, VISI-BLACK* needles, MULTIPASS* needles or CC-needles. Also available with pledgets.

PROLENE* sutures are also available as HEMO-SEAL*, with suture diameter to needle diameter ratio close to 1. HEMO-SEAL* is particularly useful in reducing needle hole leakage (for example in synthetic vascular grafts).

Indications: PROLENE* sutures are intended for use in general soft tissue approximation and/or ligation, including use in cardiovascular, ophthalmic and neurosurgical procedures. Typical areas of use include:

- Cardiovascular anastomoses
- Subcuticular sutures

Full details in the Instruction for Use included in every package.

PRONOVA*

(Poly(hexafluoropropylene-VDF)) Suture

ETHICON

PART OF THE *Johnson & Johnson* FAMILY OF COMPANIES

PRONOVA*

Poly(hexafluoropropylene-VDF)

SUTURE

Description:

Monofilament	For smooth passage through tissue.
Synthetic	For minimal tissue reaction.
Non-absorbable	Provides permanent tensile strength retention in tissue.

Color: Blue.

Range: 8-0 to 5-0 (USP). Supplied as needled sutures, armed with, for example, VISI-BLACK* needles or CC-needles.

Indications: PRONOVA* sutures are intended for use in general soft tissue approximation and/or ligation, including use in cardiovascular, ophthalmic and neurosurgical procedures. Typical areas of use include:

- Vascular anastomoses

Full details in the Instruction for Use included in every package.

ETHILON*

(Polyamide 6) Suture

ETHICON
PART OF THE *Johnson & Johnson* FAMILY OF COMPANIES

ETHILON*

Monofilament Polyamide 6

SUTURE

Description: **Monofilament** For smooth passage through tissue.
 Synthetic For minimal tissue reaction.
 Non-absorbable Provides prolonged tensile strength retention in tissue.

Color: Blue, black or clear.

Range: 11-0 to 2 (USP). Supplied as needled sutures armed with, for example, MULTIPASS* and PRIME* needles. ETHILON* is also available as ligatures.

Indications: ETHILON* (black and clear) sutures are intended for use in general soft tissue approximation and/or ligation, including use in cardiovascular, ophthalmic, microsurgical and neurosurgical procedures. Blue ETHILON* sutures are intended for use in skin closure. Typical areas of use include:

- Cuticular sutures
- Nerve adaptation
- Ophthalmology

Full details in the Instruction for Use included in every package.

For easy handling and secure knot tying.
For smooth tie down and easy passage through tissue.

**Synthetic
Non-absorbable**

For minimal tissue reaction.
Provides permanent tensile strength retention in tissue.

Color:

Green or white.

Range:

7-0 to 6 (USP). Supplied as needled sutures or ligatures.
With or without pledgets.

Indications:

ETHIBOND* sutures are intended for use in general soft tissue approximation and/or ligation, including use in cardiovascular, ophthalmic and neurosurgical procedures. Typical areas of use include:

- Heart valve fixation
- Ligament and tendon repair
- Retraction sutures

Full details in the Instruction for Use included in every package.

MERSILENE*

(Polyester) Suture

ETHICON
PART OF THE *Johnson & Johnson* FAMILY OF COMPANIES

SUTURE

Description:

Braided
Synthetic
Non-absorbable

For easy handling and secure knot tying.
For minimal tissue reaction.
Provides permanent tensile strength retention in tissue.

Color:

Green or white.

Range:

10-0 to 3 (USP). Supplied as needled sutures or ligatures. Size 10-0 is monofilament in structure.

Indications:

MERSILENE* sutures are intended for use in general soft tissue approximation and/or ligation, including use in cardiovascular, ophthalmic and neurosurgical procedures. Typical areas of use include:

- Dental surgery
- Ophthalmic surgery
- Ligation

Full details in the Instruction for Use included in every package.

SILK

Suture

ETHICON
PART OF THE *Johnson & Johnson* FAMILY OF COMPANIES

SILK

Braided Silk / Virgin silk

SUTURE

Description:

Braided
Coated
Natural

For easy handling and secure knot tying.
With wax for easy handling.
Produced from cocoons of the silk worm *Bombyx Mori*.

Non-absorbable

Provides prolonged tensile strength retention in tissue for up to 3 months.

Color:

Black or white.

Range:

10-0 to 4 (USP). Supplied as needled sutures or ligatures. Sizes 10-0 to 8-0 are manufactured of virgin silk and are twisted in construction. Virgin silk fibres are held together by natural gum secreted by the silk worm.

Indications:

SILK sutures are intended for use in general soft tissue approximation and/or ligation, including use in cardiovascular, ophthalmic and neurosurgical procedures. Typical areas of use include:

- Ophthalmic surgery
- Dental surgery
- Ligation

Full details in the Instruction for Use included in every package.

STEEL

Suture

ETHICON
PART OF THE *Johnson & Johnson* FAMILY OF COMPANIES

STEEL

Monofilament and Multifilament

SUTURE

Description:

Multifilament or monofilament.

Non-absorbable Provides permanent tensile strength retention in tissue.

Color:

Undyed.

Range:

5-0 to 7 (USP). Supplied as needled sutures and ligatures. Also available as pull-out tendon suture with barb.

Indications:

STEEL sutures are intended for use in abdominal wall closure, hernia repair, sternal closure and orthopedic procedures including cerclage and tendon repair.

Typical areas of use include:

- Closure of sternum
- Pull-out tendon repair with the Bunnell technique

Full details in the Instruction for Use included in every package.

Hernia Solutions

A brief time in surgery -
a lifetime impact on your patient

ETHICON
PART OF THE *Johnson & Johnson* FAMILY OF COMPANIES

Introduction

Hernia surgery places particular demands on the properties of surgical suture material and implants. We are undertaking intensive research and development work to meet the challenges presented in this area. The dialogue with our customers is a regular source of product innovations such as our range of MPPAM Macroporous, partially absorbable light-weight surgical meshes and a wide range of synthetic, absorbable threads. As an innovative manufacturer of surgical suture material and implants, we are investing daily on a global basis, developing our products to meet operating requirements by applying our exemplary standards of quality and consistently wide-ranging, individualised services.

Ethicon utilises more than 120 years of experience to provide you with the support you need for your work.

Reference: COBB WS, KERCHER KW, HENIFORD BT. The argument for lightweight polypropylene mesh in hernia repair. SURG INNOV. 2005

PHYSIOMESH™ Flexible composite mesh

Tissue-separating mesh.

Macroporous and partially absorbable lightweight.

For open and laparoscopic ventral/incisional hernia repair.

Clings to the abdominal wall to ease placement

Transperant and trimmable. Absorbable markers for orientation. Can be placed with either side towards viscera

Easy to roll, sufficient memory for ease of deployment

Combines exceptional handling with comfort and security for your patients

Most proven mesh before launch in 2010

16 preclinical studies

Properties:

Prolene™ macroporous 3mm, thin filament mesh, allows for excellent parietal tissue integration and provides a flexible scar mesh. Shrink about 10%.

ref: J-L Holste DVM; T Muench, DVM; P Shnoda, DVM; S Wohler, PHD; L Mcroy, MD Ethicon Inc., Sommerville, New Jersey

The MONOCRYL film is an effective tissue separating barrier-minimizes visceral attachments thus reducing the risk for complications and patient discomfort. It's partially absorbable and leaving a mesh which is compliant with the abdominal wall, promoting comfort and mobility.

30 x 50cm rectangular shape	1 per box	PHY3050R

PROCEED™ Surgical Mesh

Tissue-separating mesh

Strong, macroporous and partially absorbable lightweight.

For open and laparoscopic ventral hernia repair.

Permanent thin light polypropylene mesh

Combines good handling with comfort and security for your patients.

Clinically proven to give feasible results with very low complication rates and was found to offer technical advantages considering mesh handling.

(Berrevoet et al. Hernia 2009. Rosenberg et al. Hernia 2008.)

Properties:

- **PROLENE™ Soft** - Macroporous, lighter-weight mesh for strong tissue integration and a natural healing process.
- **Bioresorbable Oxidized Regenerated Cellulose (ORC)** - Minimizes tissue attachment.
- **Absorbable polydioxanone (PDS)** - Bonds the ORC to the mesh.

	Dimensions	Packaging	Product Code

PROCEED™ Ventral Patch - PVP™

For open hernia repair IPOM

Macroporous and partially absorbable tissue-separating device.

For comfortable healing of umbilical hernias and other fascial deficiencies.

Allows your patients to heal naturally without compromising on strength

Builds on PROCEED™ Surgical Mesh technology.

Unique design contours with the body for secure placement and stable positioning.

Macroporous, lighter-weight mesh for strong tissue integration and a natural healing process.

Partially Absorbable technology leaving minimal amount of permanent foreign material.

No ePTFE.

PVP™ upon deployment

PVP™ at 14 days

Dimensions	Packaging	Product Code
4.3 cm x 4.3 cm	2 per box	PVPS
6.4 cm x 6.4 cm	2 per box	PVPM

ETHICON SECURESTRAP™

5mm Absorbable strap fixation device. For fixation of prosthetic material to soft tissues in various laparoscopic and open surgical procedures, such as Hernia Repair.

Unique design delivers secure and consistent fixation for as long as you need it also in various angles then absorbs - leaving less implanted foreign material.

Consistent Strap Deployment

When the trigger is depressed a spring inside the handle is compressed. At full stroke, the spring is released, deploying the strap with the same consistency - reducing user variability.

Absorbable Dyed Straps

Synthetic absorbable straps dyed purple for clear visibility in the abdominal cavity. Minimal absorption in the first two weeks post implantation delivers secure mesh fixation during the tissue integration period. Degradation by hydrolysis significant after the critical tissue integration period has occurred and the polymer absorption is essentially complete at approx. 12 months.

Ref: Prediction of In Vivo Total Absorption Time for ORION Implant Using In Vitro/In Vivo Correlation Degradation Model (AST-2009-0332)

5mm singel use device with 25 absorbable STRAPS	1 device per box	STRAP25R
5mm singel use device with 12 absorbable STRAPS	6 device per box	STRAP12

ULTRAPRO™ Mesh

Macroporous partially absorbable and lightweight for natural abdominal wall function

- For lap. Inguinal hernia repair
- For open inguinal/lichtenstein
- For open incisional/ventral hernia repair

Unique combination

Made up of equal parts of non-absorbable polypropylene fibres (PROLENE™) and absorbable polyglecaprone fibres (MONOCRYL), giving this the properties of large-pore mesh(3-4mm) MONOCRYL fibres reinforce the mesh making it easier to position. MONOCRYL is absorbed within 90 - 120 days.

Light-weight PROLENE™ Mesh remains in the body. Formation of a flexible collagen fibre network instead of a rigid scar formation.

Life-long safety

Low recurrence rate due to permanent stabilisation ULTRAPRO Mesh exhibits extremely low shrinkage (average 1.9 %) and is therefore extremely suited to hernia repair (Heniford surg. INNO 205)

(Köckerling surg endosc. 2007)

A lifetime of comfort for your patients

Macroporous partially absorbable lightweight meshes are clinically proven to cause less pain and discomfort than heavyweight meshes.

(Bringman et al. BJoS 2006)

ULTRAPRO™ Hernia System,
UHS

Macroporous partially absorbable
and light weight for natural
abdominal wall function.
For open inguinal hernia repair.

UHS Posterior and Anterior view

3-In-1 device for the combined
anterior & posterior open repair
of groin hernias

- Onlay patch covers the inguinal canal floor.
- Connector - secures the underlay which virtually eliminates migration.
- Underlay - provides posterior support. MONOCRYL film allows consistent, wrinkle-free deployment.

Clinical data shows:

In conclusion, this study demonstrated that hernia surgery with 3D partly resorbable meshes is associated with low rates of recurrence and chronic pain. The rate of satisfied patients is high

A. Koch, R. Lorenz, M. Wiese, H. Lippert for the working group Quality Assurance in day case hernia surgery in collaboration with the Quality institute for operative medicine, University of Magdeburg

ULTRAPRO™ Plug, UPP

Macroporous partially absorbable, and lightweight for natural abdominal wall function

Next generation plug & patch

- Easy to use, familiar technique.
- Lightweight and partially absorbable.
- Secure repair.

A novel design

- Large onlay patch provides coverage of entire inguinal floor.
- Rim provides an intuitive platform for fixation.
- Body fills the defect with tapered 3-D mesh.
- Anchor designed to provide stability in the defect and minimize risk of migration.

VYPRO™ II Mesh

Macroporous partially absorbable and multifilament lightweight mesh for open ventral and inguinal hernia repair

PROLENE™
non-absorbable polypropylene

VICRYL™
absorbable polyglactin

- Long-lasting mutual integration achieved with improved connective scar tissue formation compared to small pore meshes.
- Partially absorbable macroporous lightweight meshes are clinically proven to cause less pain and discomfort than heavyweight meshes
(Bringman et al. BJoS 2006)
- Pore size 3-4mm

Traditional polypropylene mesh. 90 days post-implantation. Fold development (in-vivo study)

Lightweight VYPRO* II mesh. 90 days post-implantation. Fold-free incorporation (in-vivo study)

PROLENE™ Hernia System

3-In-1 device for the combined anterior & posterior open repair of groin hernias

Innovative three-in-one design

1. Onlay Patch

Provides a patch for the floor of the inguinal canal providing the security of conventional mesh repair techniques.

2. Connector

Sits in internal ring or defect. Secures overlay patch to underlay for security.

3. Underlay Patch

Should be deployed, pre-peritoneally, after insertion to provide a posterior repair.

Dimensions		Packaging	Product Code
Onlay Patch	width: 4,5 cm length: 10 cm	1 per box	PHSM1 Medium
Connector	diameter: 1,91 cm height: 1,27 cm		
Underlay Patch	diameter 7,5 cm		
Onlay Patch	width: 4,5 cm length: 10 cm	1 per box	PHSL1 Large

Onlay Patch	width: 5,5 cm length: 12,5 cm	1 per box	PHSE1 extended
Connector	diameter: 1,91 cm height: 1,27 cm		
Underlay Patch	diameter: 10 cm		

All three sizes are packed in flat, easy-to-store boxes with patient tracking labels.

ETHICON Hernia Solutions

One source for all your surgical needs

PHYSIOMESH™

Flexible composite mesh- MPPAM macro porous partially absorbable mesh. Tissue separating mesh for open and laparoscopic ventral/incisional hernia repair.

PROCEED™

Tissue separating and MPPAM*. For open & laparoscopic Ventral/incisional hernia repair.

PVP™

Tissue separating and MPPAM*. For open repair of umbilical hernias or other fascial defects.

ETHICON SECURESTRAP™

5mm Absorbable strap fixation device. For fixation of prosthetic material to soft tissues in various laparoscopic and open surgical procedures, such as hernia repairs.

ULTRAPRO™ Mesh

MPPAM*. Pore size 3-4mm. Monofilament mesh for abdominal wall reinforcement. For open and lap. ventral/incisional and inguinal hernia repair.

ULTRAPRO™ Hernia System, UHS

MPPAM*. 3-in-1 device for the combined anterior & posterior open repair of groin hernias.

ULTRAPRO™ Plug

A novel plug & patch design in MPPAM. For openinguinal hernia repair.

VYPRO™ II

MPPAM*. Pore size 3-4mm Multifilament mesh for open and laparoscopic inguinal hernia repair.

VYPRO™

MPPAM pore size 5mm. Multifilament mesh for open incisional hernia repair.

PROLENE™

Monofilament polypropylene mesh for the repair of abdominal wall fascial defects.

PROLENE™ Hernia System, PHS

3-i-1 hernia device for the combined anterior & posterior repair of groin hernias.

VICRYL™

Completely absorbable mesh for temporary wound or organ support.

MERSILENE™

Pliable polyester mesh for the repair of abdominal wall fascial defects.

- To provide the most comprehensive range of products to cope with the complexity of bleeding scenarios found in modern surgery
- Supporting healthcare professionals in making the right choice of product for the specific clinical situation, ensuring cost efficiency
- Constantly innovating to support healthcare professionals deliver optimal patient outcomes in the area of blood management

INTRODUCING OUR FAMILY OF EXTENSIVE HAEMOSTATIC SOLUTIONS

SURGICEL®

SNoW™
ABSORBABLE HAEMOSTAT

Structured Non-Woven material delivers improved speed, handling and over performance versus Surgicel® Original® due to the increased surface contact, conformability and adherence to the bleeding site. Easy to reposition without sticking to instruments. Ideal for open and minimally invasive procedures.

SURGICEL®

FIBRILLAR™
ABSORBABLE HAEMOSTAT

Versatility, adherence and conformability in the most demanding procedures. Unique ORC-fibril technology delivers fast haemostasis.

SURGIFLO™
HAEMOSTATIC MATRIX KIT
Plus FlexTip with **Thrombin**

Engineered for results. The advanced flowable haemostat achieves haemostasis in < 2 minutes when used with thrombin. Ideal for a broad range of surgical procedures and bleeding challenges.

SURGICEL®

NU-KNIT®
ABSORBABLE HAEMOSTAT

Dense knit material provides excellent strength in the presence of heavy bleeding. Wrap it around tissue, insert through a trocar, or suture it in place for excellent application control.

FIBRIN SEALANT

For more information on Fibrin Sealants available from Ethicon™ Biosurgery, please contact your Product Specialist.

SURGICEL®

ORIGINAL
ABSORBABLE HAEMOSTAT

For flexibility and reliability. Trusted by surgeons for half a century to stop bleeding. Proven record of safety and efficacy.

SPONGOSTAN™

SPONGOSTAN™ Absorbable Gelatin Sponge is available in a variety of sizes – including a pre-shaped haemorrhoidectomy sponge, which provides ease of use during temporary packing.

For direct ordering and delivery contact you local ETHICON Biosurgery Product Specialist.

Other Products

PRINEO* Skin Closure System

PRINEO* Skin Closure System is intended to replace subcuticular/ intradermal suturing when there is no tension on the wound or when tension has been relieved by deep dermal or subcutaneous sutures.

PRINEO* Skin Closure System significantly reduces closure time by combining advanced mesh technology with a topical skin adhesive. The system provides microbial barrier and maintains skin approximation until removed. Enables patients to shower immediately following a procedure.

PRINEO* Skin Closure System consists of a self adhering, pressure-sensitive adhesive (PSA), polyester-based mesh for temporarily holding together the approximated skin edges of an incision and a 2-octyl cyanoacrylate liquid adhesive formulation for final skin/wound closure of incisions

Time Savings

- OR procedure time
- Anesthesia
- Post-Op Management

Suture Closure Equivalence

- Equivalent or Better Dehiscence
- Equivalent or Better Cosmesis

Ease of Use

- Wound Edge Approximation
- Minimal Learning Curve

Patient Comfort

- Ability to Shower Immediately
- No Blistering

Product Name	Size	Packaging	Product Code

Other products

INTRODUCING DERMABOND ADVANCED

Product Overview

- Superior strength and microbial protection versus other commercially available topical skin adhesives_{2,3}
- Single-layer application and reduced drying time₂

Product Performance

- Adds 75% more strength to the wound closure than sutures alone, when used in addition to sutures₂
- In vitro inhibition of gram-positive bacteria (MRSA and MRSE) and gram-negative bacteria (E coli)*
- Provides a microbial barrier with >99% protection in vitro for at least 72 hours against organisms commonly responsible for SSIs^{4**}

Patient benefits

DERMABOND® Adhesive has benefits that enhance patient comfort and satisfaction_{5,6}, such as:

- Excellent cosmesis_{7,8}
- Ability to shower immediately after application₉
- No need to remove sutures or change dressings₇

ETHICON INTRODUCES

An exciting new option for tissue control

STRATAFIX™ Knotless Tissue Control Devices—a portfolio of products appropriate for a broad range of surgical applications

Consistency—More consistent tension control and approximation during closure*

- Unique anchor design provides multiple points of fixation along the suture line, allowing tension on the suture to be maintained during closure
- Compared to traditional sutures, enables surgeons to easily manage tension and control approximation with each pass

Security—Strength and security of interrupted suturing without knot-related complications

- Anchors running along the length of STRATAFIX™ Devices provide secure fixation, eliminating the need for knots
- In preclinical studies, multiple cuts to a STRATAFIX™ Spiral Knotless Tissue Control Device did not result in tissue separation¹⁻³

Efficiency—More efficient than continuous suturing

- No need for an assistant to follow the suture line
- With equal strength and security, STRATAFIX™ Devices can close wounds substantially faster than using an interrupted technique¹⁻⁸

STRATAFIX™ Spiral Knotless Tissue Control Devices

A broad range of bidirectional devices appropriate for several closure techniques

Stratafix™
KNOTLESS TISSUE CONTROL DEVICE
Secure every pass.

STRATAFIX™ Knotless Tissue Control Devices are available in short-term, long-term, and nonabsorbable polymers in a portfolio of sizes and lengths, with multiple needle types

Consistency

More consistent tension control and approximation during closure*

Security

Strength and security of interrupted suturing without knot-related complications

Efficiency

More efficient than continuous suturing

*Compared to traditional sutures.

Stratafix™
KNOTLESS TISSUE CONTROL DEVICE
Secure every pass.

BLAKE* Silicone Drains

BLAKE Drains offer excellent drainage with four continuous channels that provide greater tissue contact area than regular perforated drains in addition to multiple drainage routes to resist clogging.¹ BLAKE Drains are constructed of silicone, with a solid-center design for strength and flexibility.

The drains are available with and without Ethicon's patented bendable TROCAR technology, which can be angled to facilitate easier placement of the drain (Round Hubless BLAKE Drains only).

The design of the drains allows greater patient comfort and enhanced ambulation. Patients experience less discomfort upon removal, greater ease of mobility postoperatively, and less discomfort during patient movement and deep breathing exercises.^{2,3,4}

POWERSTAR* bipolar scissors

BIPOLAR SCISSORS FOR OPEN SURGERY

PowerStar scissors are multifunctional, for precise cutting, dissecting and achieving hemostasis with one instrument.

This leads to fewer instrument changes, thus reducing operating time and allowing an uninterrupted focus on the surgical site.

The safety of advanced bipolar technology mini-mises undesired collateral tissue damage, as the current only passes through the tissue between the blades.

Because of the short bipolar current pathway, PowerStar may be a safer alternative to monopolar surgery in patients with pacemakers or implants and may reduce ECG interferences.

The two blades of the scissors are insulated from one another to form the active electrodes of the bipolar instrument. This is achieved by applying a ceramic coat to one surface of the scissor blade and clear surface hardening to the other. An insulated screw is inserted and the handles are coated.

PowerStar scissors are available in various lengths and designs to best suit your requirements. Cables with different connectors can be obtained to ensure compatibility with most electrosurgery generators.

PROXIMATE PLUS MD

Stapler-grip Skin Staplers

Ease of Use

- The ergonomic design of the non-reloadable, disposable Proximate Plus handle ensures easy handling.
- The staples are applied by pressing the handle, with no further movement in any direction.

Excellent Cicatrical Results

- The large opening situated on the head of the stapler enables ideal tissue placement under the crown of the staple and perfect central positioning relative to the incision.
- Consistent staple formation ensures good cosmesis.
- Polytetrafluorethylene (PTFE) lubricant coats the staples facilitating penetration and less painful removal after wound healing.
- Two staple sizes accommodate all incision types.

PDS* Plates

PDS*Plates (poly-p-dioxanone) Synthetic absorbable implant for orbital floor repair

DESCRIPTION	PACKAGING	CODE
0.25mm x 30mm x 40mm	3 packs per box	ZX3
0.5mm x 30mm x 40mm	3 packs per box	ZX4
0.25mm x 40mm x 50mm	3 packs per box	ZX5
0.5mm x 40mm x 50mm	3 packs per box	ZX6
0.15mm x 30mm x 40mm	3 packs per box	ZX7
0.15mm x 40mm x 50 mm	3 packs per box	ZX8

ZX3
0.25mm x 30mm x 40mm

ZX5
0.25mm x 40mm x 50mm

ZX7
0.15mm x 30mm x 40mm
with perforations

ZX8
0.15mm x 40mm x 50mm
with perforations

ZX4
0.5mm x 30mm x 40mm

ZX6
0.5mm x 40mm x 50mm

Pledgets

Needle	Size mm	Description	Number per box	Code
ETHSORB* Pledget	15mm x 30mm x 1 mm	Absorbable pledget	12	ZV1530G
ETHSORB* Pledget	15mm x 90mm x 1 mm	Absorbable pledget	6	ZV1590
Teflon pledget	3mm x 3mm	Firm non-absorbable pledget, 5 pieces per pack	36	X948H
Teflon pledget	3mm x 6mm	Firm non-absorbable pledget, 5 pieces per pack	36	X273H
Teflon pledget	8mm x 5mm	Soft non-absorbable pledget, 2 pieces per pack	12	X619G
Teflon pledget	8mm x 5mm	Firm non-absorbable pledget, 2 pieces per pack	36	X627H
Teflon pledget	20mm x 40mm	Soft non-absorbable pledget, 1 piece per pack	12	EH370G

ETHISORB* Absorbable Femur Plugs

Needle	Size mm	Description	Number per box	Code
Femur Plug	30mm (top) * 8mm (bottom)		6	ZV3000
Applicator		Reusable, non-sterile	1	ZV2001

Other products
