

CoCr stent designed in Japan

CoCr Coronary Stent System
Kaname™

Innovative Stent Design

Cobalt chromium technology
& the **unique stent design**
offer an excellent deliverability & crossability
to treat even the most difficult lesions

Enhanced stent flexibility

OPEN CELL STENT DESIGN AND THIN STRUTS
CONTRIBUTE TO OUTSTANDING FLEXIBILITY

- ▶ **Uniform and homogeneous cell geometry** for enhanced stent flexibility and vessel conformability, to treat distal lesions and tortuous anatomy.
- ▶ **80 µm thin struts** and a unique stent design provide enhanced flexibility, whilst maintaining radial strength and reducing stent recoil to provide long term outcomes.

Excellent lesion access

SUPERIOR TECHNOLOGY FOR EXCELLENT LESION ACCESS

- ▶ **Low entry profile 0.43 mm** ensures excellent lesion access to treat the most challenging cases and tight lesions.
- ▶ Innovative **enfold crimping technology** improves stent crossing profile and enhances lesion access in challenging anatomies.

- ▶ **The Ryujin™ shaft** provides improved pushability and allows easier access to complex lesions.
- ▶ **Hydrophilic coating** facilitates smooth passage to treat tortuous vessels and tight lesions.

Terumo's expertise for superior product performance

- ▶ **Open cell area** provides wide side-branch access to treat bifurcation lesions.
- ▶ **CoCr technology** offers outstanding radiopacity allowing a better stent visibility.
- ▶ **Low compliant balloon** for optimal stent expansion to improve long term outcomes.

Specifications

Stent material: Cobalt Chromium L605

Guidewire diameter: 0.014"/0.36 mm

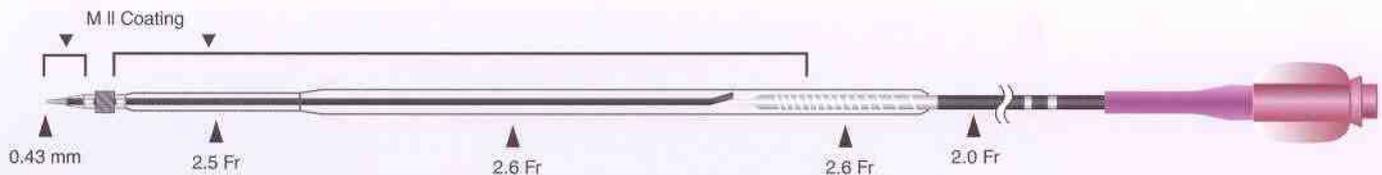

Balloon material: Nylon elastomer

Nominal pressure: 9 atm

Rated burst pressure: 16 atm – 2.5 to 3.0 mm
 14 atm – 3.5 to 4.0 mm

Average stent crossing profile: 0.041" for 3.0 mm diameter

Usable length: 145 cm
