SELF ADHESIVE LEAD STRIP, 12 MM ON 10 METER ROLL

« Previous - Next »

Self adhesive lead strip, 12 mm on 10 meter roll

3113

Standard (Natural)

This type of lead, has an untreated surface and is similar in appearance to lead profile as used for traditional Stained Glass. Newly delivered, this type of lead should be bright and shiny. However, the untreated surface will, depending on the atmospheric conditions, oxidize into a matte gray, dark gray. The natural aging process can be a lengthy process.

To make your project as a "Really Stained Glass" look a like project, you can even solder the crossings and joints. This is only possible with the Standard Natural lead and with some experience in soldering. To give it an aged appearance, you can also edit it with a patina. Download how. Aging of the lead is only possible with the Standard Natural lead and if no Overlay film is applied. The Natural lead profile can be applied indoors and outdoors, as well as in insulating (double glazed) panels.

12mm 'Gold' Self Adhesive Lead - 45 Mtr

Description

Our Self adhesive profiles are made with 99.5% pure lead which is modified with a small amount of antimony to improve its weathering performance and surface polish. A high performance, acrylic, pressure sensitive adhesive ensures a long life span in both single glazing and in double glazed units. All our products are manufactured to ISO 9001:2015 quality standards and have been tested in units complying with the European standard EN1279. Our coated lead products have been fully weather and age tested to the ASTM-G53-96 standards.
