

GASTROENTEROLOGIC SERIES

GASTROSTOMY CATHETER WITH ENFIT CONNECTOR

Fortune® Silicone Gastrostomy Catheter with ENFit

Connector:

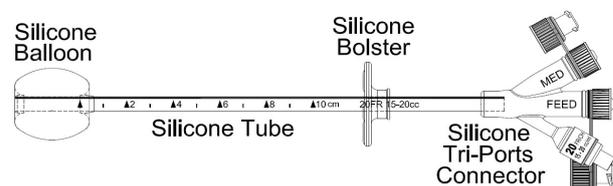

- The silicone gastrostomy catheter with ENFit connector is soft and flexible, It includes a silicone bolster, a silicone balloon, and silicone tri-ports connector. These components are medical grade silicone for enhancing patient comfort and superior biocompatibility; It can reduce the discomfort contact with the tube.
- Transparent tube for easy visual inspection, X-ray-opaque line for easy and accurate confirmation of tube position by X-ray. Depth markings for convenient confirmation of the tube position.
- Wide and open-rounded end improves flow, and the shortened tip design reduces gastric mucosa irritation.
- The tri-ports connector of the gastrostomy tube has assembly 2 ENFit male connectors and 2 ENFit female caps in the feeding lumen and the medication lumen. When the feeding or medication is stopped, the ENFit female caps can be close by rotated clockwise to prevent the air into the stomach.
- External Bolster prevents tube migration and eliminates the needs for tape or suture.
- The ENFit connector can prevent the misconnection risk, and provide a safer feed and medication channel for the patient.

SPECIFICATIONS

Gastrostomy Catheter with ENFit Connector:

| REF. No. | Size. | Balloon volume | Length | Depth marking | Description |

Il legatore emorroidario monouso LEM è un dispositivo Sapi Med brevettato ed unico nel suo genere.

È realizzato in due versioni: ad "ASPIRAZIONE" e a "TRAZIONE". Entrambi sono dotati di ampio cilindro (Ø 10 mm) per il contenimento del nodulo.

Dispone di un'impugnatura ergonomica ed il grilletto di comando espulsione anello elastico è provvisto di balestra di richiamo. Una calcolata angolarità permette una buona visione nell'intervento.

Entrambi i modelli sono disponibili con cono a scalini per impedire all'anellino di tornare indietro durante la fase di "carico" oppure con cono a pareti lisce e caricatore di anellini. Il dispositivo è costruito in materiale plastico trasparente antiurto e marchiato CE secondo la direttiva 93/42.

The LEM Disposable Haemorrhoid Banding Ligator is a unique, patented design made from a light, tough polymer. It is a single-patient product available in two variants: for use with either suction or grasping forceps.

Both variants are supplied with a stepped cylindrical cone (Ø 10mm) for easy band loading, or with a smooth cone and a ring-loader. The 20-degree angled tip of the LEM ensures optimal visual clarity and the ergonomically designed trigger enables smooth and accurate banding procedures.

A length of flexible suction tubing connects the LEM to a low-pressure suction aspirator. The haemorrhoid is retracted into the LEM's barrel-end and then banded by the operator using the trigger-action. Throughout the procedure, the suction may be manually thumb-controlled by the operator. If the forceps variant is chosen, suction is replaced by the insertion of grasping forceps through a cutaway section in the barrel so that the haemorrhoid may be retracted manually prior to being banded.

The LEM is designed for use with the Sapi Med Self Light operative proctoscopes.

LEM ad ASPIRAZIONE

Il dispositivo, per un corretto funzionamento, necessita di un aspiratore chirurgico a bassa pressione da collegare, per mezzo di un tubo, all'appendice posta alla base dell'impugnatura. L'operatore con la semplice pressione del pollice sul foro collocato sulla canna di aspirazione può regolare il flusso d'aria che richiama, nel cilindro, il nodulo emorroidario alla cui base verrà posto l'elastico. Non contiene lattice. Non sterile.

LEM a TRAZIONE

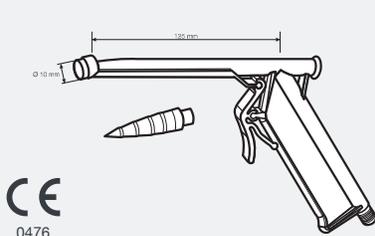

Il dispositivo si presenta esteticamente come il modello ad aspirazione. Non è più utilizzabile con l'aspiratore. Il segmento o la porzione di strumento che viene introdotta nel canale anale, è provvista di un cilindro aperto nel quale verrà introdotta una pinza di trazione per ritirare il nodulo emorroidario alla cui base verrà posto l'elastico. Non contiene lattice.

LEM for use with SUCTION

Suction tubing connects the LEM to a low-pressure suction aspirator, and the LEM is then inserted into an operative proctoscope and placed over the surgical site. The haemorrhoid is retracted from the tissue by suction and then banded using the trigger-mechanism. During the procedure, the rate of suction may be controlled manually by the practitioner's thumb. Latex free. Non sterile.

LEM for use with FORCEPS

In place of suction, grasping forceps are inserted through a cut-out opening in the barrel of the bander and used to manually retract the haemorrhoid for banding. Latex free.

REF A.5650: LEM ad aspirazione con cono zigrinato.

REF A.5650.5: kit LEM ad aspirazione con cono zigrinato e n° 5 anellini elastici.

REF A.5650.5LF: kit LEM ad aspirazione con cono zigrinato e n° 5 anellini elastici LATEX FREE.

Confezione: n° 25 pz.
