

Flexible self-locking in the basket

Catalog no. 53877

The flexible self-locking system in the rescue cage enables a person in the cage and in the vicinity of the cage to be secured against falling.

The safety system consists of one or more fall arresters permanently mounted in the rescue cage. These are suspended in a device that allows them to be used in any direction. The strap length of 1.8 m means that people can also be secured outside the basket (when climbing over).

We recommend 2 devices per basket.
