Foerster Lung Grasping Clamp

9909-920

9909-925

VATS Procedures

- The oval ring jaws provide an atraumatic, secure grasp.
- This classic length works well for a variety of patient sizes and for most multi-port or Uniportal VATS procedures.
- May be used for grasping a well-folded sponge to use as a "sponge-stick" for both blunt dissection and to apply pressure for temporary control of bleeding.
- 25 x 35 mm oval ring jaws provide an atraumatic, secure grasp on delicate, friable tissue such as emphysematous lung tissue.

Foerster Lung Grasping Clamp

9909-921

9909-922

VATS Procedures

- The 20 mm oval ring jaws provide an atraumatic, secure grasp designed to avoid damage to lung tissue.
- This shorter length may work well for smaller size patients or when grasping lung tissue close to working ports/incisions.
- May be used for grasping a well-folded sponge to use as a "sponge-stick" for both blunt dissection and to apply pressure for temporary control of bleeding.
- Choice of standard left curve jaw or right curve jaw (left-hand style).

DeBakey Jaw Styles

MIS Procedures

- May be used as an aortic cross-clamp for minimally invasive cardiac procedures such as valve replacement or repair.
- This clamp may be positioned on the aorta via a sub-axillary incision.
- The selection of jaw sizes accommodates a wide range of patient sizes and anatomy.
- The 1 x 2 DeBakey jaws provide an atraumatic and secure grasp of the aorta. The wider 2x3 DeBakey jaws of the 9909-232 clamp provide an even more gentle yet secure grasp of the aorta.

VATS Procedures

- The rounded blunt ends of the jaws are useful for blunt dissection to mobilize the artery, vein and bronchus.
- May be used as a guide prior to stapling by passing behind the mobilized artery, vein or bronchus to replicate the direction of the linear stapler.
- May be used to clamp the lung tissue parallel to the stapler when stapling the lung tissue; this creates even tissue tension which results in a smooth, even staple line.

VERTIMAS

6 pirkimo dalis.

6.1. Torakoskopinis mazgų sugriebėjas, instrumento diametras 5 mm, lenktas 11 mm
pailgas žiedinis darbinis galas, rankenos su užraktu, bendras ilgis 33 cm

Katalogo kodas - 9009-223

6.2. SCANLAN® torakoskopinis Foerster tipo spaustukas diametras 10 mm, žiedinės
rankenos, 20 mm darbinis galas ovalo formos, lenktas į kairę, darbinis ilgis 24 cm,
bendras ilgis 33,5 cm

Katalogo kodas - 9909-920

6.3. SCANLAN® torakoskopinis Foerster tipo spaustukas diametras 10 mm, žiedinės
rankenos, 20 mm darbinis galas ovalo formos, lenktas į kairę, darbinis ilgis 19 cm,
bendras ilgis 29 cm

Katalogo kodas - 9909-922

6.4. SCANLAN® torakoskopinis Chitwood DeBakey tipo spaustukas, diametras 10 mm,
žiedinės rankenos, 2x3 platus lenktas į kairę DeBakey tipo darbinis galas, darbinio galo
ilgis 10 cm, darbinis ilgis 25,4 cm, bendras ilgis 36 cm

Katalogo kodas - 9909-232

6.5. SCANLAN® torakoskopinis Gonzalez-Rivas tipo disektorius, diametras 5 mm,
žiedinės rankenos, Mixer-style 1x2 DeBakey tipo darbinis galas, rankenos be užrakto,
darbinis ilgis 19 cm, bendras ilgis 29 cm

Katalogo kodas - 9009-211

6.6. SCANLAN® torakoskopinis DeBakey Cooley tipo spaustukas, diametras 10 mm,
žiedinės rankenos, darbinis galas lenktas 90° kampu, rankenos su užraktu, darbinis ilgis
24 cm, bendras ilgis 34 cm

Katalogo kodas - 9909-202

6.7. SCANLAN® tipo torakoskopinis adatkotis, diametras 10 mm, skirtas darbui su 2-0
mažesne adata, rankenos paauksuotos, tiesus pakietintas darbinis galas, darbinis ilgis 21
cm, bendras ilgis 34 cm

Katalogo kodas - 9909-610

6.8. SCANLAN® torakoskopinės Chitwood tipo disekcinės žirkklės, diametras 5 mm,
darbinis galas lenktas į kairę, Super Cut™ tipo geležtės, geležčių ilgis 3 cm, žiedinės
rankenos, darbinis ilgis 18,5 cm, bendras ilgis 29 cm

Katalogo kodas - 9009-738SC
