CATHETER LOCK SOLUTION

Our DuraLock-C Pre-Filled Syringes, packaged in fully sterile Tyvek pouches, increase overall procedural efficiency. In addition, while other pre-filled cellophane-wrapped syringes offer a sterile fluid path only, we take ours a step further and fully sterilize the outside of the syringe as well as the fluid path.

FEATURES & BENEFITS

Anticoagulant

Used to maintain catheter patency which may result in fewer catheter withdrawals due to complications.

FULLY STERILE PACKAGING

Terminally sterilized, allows for aseptic technique and the syringes to be placed in the sterile field.

Sterile pouches may increase overall procedural efficiency and remove the risk of inadvertent needle sticks and glass particle injections.

PRE-FILLED MULTIPLE CONCENTRATIONS

4%, 30% and 46.7% concentrations

Pre-filled syringes ready to use immediately after removing sterile pouch and syringe cap.
